Huerta Speaks
On United Farmworkers
By JAMES P. LEVERETTE

Strikes, boycotts and revolution were the topics of a speech made by United Farmworkers First Vice President, Dolores Huerta, yesterday in a noon rally celebrating the National Week of the Farmworkers.

The week "commemorates the farmworkers for all the good work they do," said Huerta. She added that this day also marked the hundred year anniversary of the Mexican Revolution, led by Pancho Villa.

"Who's more important, an attorney or a farmworker? Who can we do without the longest," Huerta asked. She said that Thanksgiving is a good time to recognize the importance of farmworkers.

Huerta told students that poor people are suspicious of people who leave the community to attend college degrees because they find that the educated will return to exploit them.

"Don't make your goal making a lot of money," said Huerta. "Community needs should precede individual needs," according to Huerta.

She read a passage from Catholic Worker saying, "If everyone tries to be better off for themselves, we really can't be better off.

Huerta, mother of 11 children, said that birth control is not the problem. She said that birth control should be made available to all people to help people to control the population.

"Don't make your goal making a lot of money," said Huerta. "Community needs should precede individual needs," according to Huerta.

Remote Sensing Unit
Talks to NASA Officials
By BARBARA MILLER

Prospective applications of remote sensing technology were dwelled on with representatives from the National Aeronautics and Space Administration during a presentation by UCSB's Remote Sensing unit of the geography department last week.

Remote sensing technology involved the use of specialized equipment, such as satellites, and techniques, such as radar and aerial photography, to gather environmental data on the study of land and water areas and their potential.

Devices and techniques used by the research unit were explained at the presentation, given primarily for the NASA Agristars, a program management team. Their title stands for Agriculture Resource Information Survey Through Aerospace Remote Sensing.

The Agristars are examining the potential of various research programs to help conduct world-wide crop yield studies.

Presently touring universities in the U.C. system, the Agristars are looking at ongoing research to possibly provide some supportive funding.

"The presentation was intended to show Agristars UCSB's futuristic plans for research in Remote Sensing," said Julie Lange, secretary for geography professor Jack Estes. "They were impressed by our capabilities and application of such practically oriented research."

Presently the GRSU has professors, researchers, graduates, and undergraduates working on more than 20 projects at a funding level of about $500,000 for 1979. The GRSU was established in 1971.

Estes said GRSU objectives are "to advance the current state of knowledge of the application of remote sensor technology to environmental concerns and to conduct research on both the basic and applied aspects of this technology."

The data which is gathered by remote sensing equipment can be used in the areas of agriculture, forestry, soils, land resources, hydrology and oceanography.

Sensors such as CIR aerial photography, sonar, passive and active microwave, and airborne radar make it possible to study and research more intricately prime agriculture lands, forest classification, soil moisture detection, and hydrologic modeling. It also is used for forest mapping of the Santa Barbara Channel, detection of oil on the sea surface, and long range planning in land and land use.

"The GRSU is funded by the U.C. system, the federal government, the state government, and various labs and institutes within UCSB," Estes said.

A beautiful voice.
An inspired collection of songs.

Santa Barbara Weather: Fairly, breezy. Warmer with highs in the low 70s, lows in the higher 40s. High tides will occur at 9:38 a.m. and 11:18 p.m.

CHICANO PRE-LAW COMMITTEE: Reps from Boalt Law School will be visiting The Center for Chicano Studies from 12:30 p.m. to 1:30 p.m. in Eng. Bldg., Rm. 1132.

TODAY

MATHMATICS: Meeting, Nov. 27, "Teaching High School Mathematics," an information about requirements, and present day job opportunities and salaries, 1 p.m., Phelps 1444.

CHRISTIAN SCIENCE, CHRISTIAN ORGANIZATION: Christian Science Campus Counselor, Wendy Manka, holds office hours today from 1:30 to 4:30 in UCen 294. "There is no need to knock on the door; come and talk!"

NEXT WEEK

MECHANICAL & ENVIRONMENTAL ENGINEERING: Seminar, Nov. 28, 4 p.m., Eng. Bldg., Rm. 3142.

SCIENCE, CHRISTIAN ORGANIZATION: Christian Science Campus Counselor, Wendy Manka, holds office hours today from 1:30 to 4:30 in UCen 294. "There is no need to knock on the door; come and talk!"

L.V. CRAFT CENTER: Macrame Workshop — Nov. 27, 1-3, I.V. Craft Center. Learn to make your own beautiful plant hangers for Christmas gifts or your home. For more info, and registering call 828-6949 or stop by the Craft Center.

L.V. QUAKERS: Meeting, Nov. 28, 7:30 p.m., for unprogrammed worship, discussion, and fellowship. All interested persons welcome.
"Doomsday Strategy"

Arms Race, Nuclear Question, Topics of Lens Talk

By DANA ROSKEY

Embarking on the growing chance of nuclear war, author Sidney Lens gave a lecture entitled "The Doomsday Strategy: A Nuclear Question, Topics of Lens Talk." Monday afternoon in campus Hall. Lens said the modern military situation is unique in history because "the preparation for war can itself be the cause of World War.

The actual reason for the large amount of weapon research conducted in the U.S., he said, is that the nation's leaders want to find a way of winning a confrontation without a fear of retaliation.

Lens contends that this is impossible: "The nuclear age has posed a problem that technology can't answer. There is no defense."

In a brief introduction to the lecture, Karen Kelly of the WLCP gave a short history of the university, Livermore Laboratory and the Los Alamos Scientific Laboratory and discussed the research taking place there. She said the aim of the WLCP is to bring about "the constructive purposes.""The Daily Nexus is published by the Press Council and partially funded through the Associated Students of the University of California, Santa Barbara. Pressing Need

Today and continuing through next week, the campus community is being asked to donate money to a Cambodian relief fund being collected by members of the Student Hunger Action Group. We sincerely hope all students, faculty and staff make a deposit, which will go directly into aiding starved Cambodians.

Hunger is prevalent in Cambodia. This country, has seen its one time population of eight million decimated to a total near four million and declining, as a direct result of over a decade of political turmoil. Today an estimated 2.25 million people are reportedly starving in Cambodia.

The politics of this issue are deeply rooted in that country, beginning with the bombing by the United States in 1969, and continuing through the brutal governments of Lon Nol and Pol Pot and finally today's Heng Samrin government, a Vietnamese backed regime.

Relief aid for the Cambodians who are starving has been significantly hampered by the politics between the current government, and the opposition Khmer Rouge forces which remain a strong force throughout the countryside. The Heng Samrin government, is bent on destroying the Khmer Rouge guerrillas which number approximately 30,000, and who support the deposed Pol Pot leaders.

Since this struggle is its top priority, the Heng Samrin government has limited the paths of access to relief agencies, to those airlifted or making boat deliveries up the Mekong river to the capital city of Phnom Penh. An effort by three U.S. senators to have a "land bridge" to set up a five ton of food to Cambodia immediately, a demand in- that has developed. We abhor these obstructionist tactics for they curb the relief agencies ability to answer the Cambodian cries for food.

Recently President Carter acted to increase the U.S. aid to Cambodia to $69 million. Also a one-day United Nations cease fire in Cambodia immediately, was included in the trade agreement between the two superpowers. This is noteworthy because the Soviet Union, under pressure from the U.S., is shipping some 150,000 tons of aid to Cambodia immediately, which is a direct threat to the legitimation of the Heng Samrin regime. Presently the Pol Pot regime maintains a United Nations cease fire. Again, high politics arise out of the cease fire, obstructing the remedy of the greater concern—that of human life.

We cannot but be pleased to see the U.S. aid, which will be used by those agencies being permitted into Cambodia: UNICEF, OXFAM, The Red Cross and World Vision International.

This is the first step. It cannot be the last. The politics of Cambodia are in disarray and must be solved. Only when a political solution is achieved can unrestrained aid to the starving masses begin. We look forward to that end, knowing well that all current efforts must be maintained.

And that brings us full circle to our first recommendation, making a donation to the relief fund. The politics of hunger affects each and every one of us. We urge concerted efforts of nations to end the current holocaust in Cambodia. We also urge each and every individual in this country to give something of themselves to assist.

DOONESBURY

Editor, Daily Nexus:

On Monday November 19th you carried an article, "Students Win Court Case Over Apartment Leasing." We the four students involved, were glad to see the Nexus finally had time to fit this important story among the song and dance at the interest of profit and cooperation we received from the Nexus in the past and the previous week we first took Rentals ETC. John Warkentin, the small claims court, we won $600 a piece—compensation. The Nexus was right on top of the case, and a story was written the next day. However, the case didn't end there. John Warkentin, a tenant, had submitted his court case to the Superior Court level, and on November 9th the trial took place, and Superior Court Judge Keith Young, again awarded us the decision, however, the case is still 'on the docket', we were awarded full compensation of $120 each. So again we went to the Nexus with the story. An interview was set up with the copy editor; we waited for an hour and the never showed up. We were finally assigned a reporter three days later who merely interviewed us on the phone and failed to express our major opinions on the importance of the case.

I guess the Daily Nexus has more important articles to concern themselves with. We, however, find this "hand-up hand-down" housing in little Vista and tenant/landlord relationship are by far the major problems facing UCSB students this year. In fact, a recently allocated set up of a free legal clinic to help students ease the cost of taking their landlords to court in rental disputes. We feel the most important aspect of both of our cases, which the Nexus failed to do anything about is, that we knew we were in the right and we weren't let Rentals ETC. or John Warkentin, the owner of the building who also happens to be an attorney, intimidate us just because we are students. It is exactly what they tried to do — convince us with their cool talk and legal loopholes that we didn't have a contract, even though we knew we did.

We feel that this case should be an inspiration to other students who incur problems with their landlords. Instead of conceding to their landlords tactics, the tenants should stand up for their rights as tenants and get a contract, even though we knew we were in the right and we weren't...
Intro to PIRG

Editor, Daily Nexus

We invite you to attend the organizational meeting of the UCSB PIRG organizing committee on Tuesday November 27th at 4 p.m. in UCen Rm. 273. The meeting will serve as the formal kick-off of the campaign to establish PIRG at UCSB.

PIRG stands for Public Interest Research Group. A PIRG is a special type of student organization established as a mechanism for students to affect public policy on issues ranging from environmental quality and corporate responsibility to consumer protection and governmental responsiveness. A PIRG is a non-profit, non-partisan corporation with a board of directors elected by the students at participating college campuses. The board sets all PIRG policy, manages the PIRG budget and hires a staff of full-time professionals to serve as a resource for the social change efforts the students wish to undertake. The attorneys, researchers, lobbyists and organizers that make up the PIRG staff provide the experience and expertise that students often lack.

Students work with the staff people researching, lobbying and organizing on issues selected by the board. Often, times students receive academic credit for their work with PIRG and are thus able to use work done in school for a productive social purpose.

PIRGs are currently operating in over 20 states. They exist in various stages of development with New York PIRG being the largest. Students in New York run a million dollar organization employing over 100 full-time staff who work at 25 different offices around the state. There are now five California campuses organized, and PIRG is doing excellent work at those locations.

Organizing efforts are underway at UCLA, UCi and now at UCSB. The potential for PIRG in California is great. Students could definitely use a resource like PIRG in dealing with the issues we are concerned with—housing supply and cost, LNG, commercial development, alternative energy and others.

We hope to see as many students as possible at this organizational meeting. We will be laying a plan for next quarter’s effort to win the support of the student body for the PIRG idea. Rick Franklidge, who has been hired by Ralph Nader to assist students in organizing PIRGs, will present information on PIRG and how PIRG can be established at UCSB.

Another Plea

(Continued from p.4)

The act is criminal, but my concern is the return of the signs or any information that would lead to recovering the signs. The signs provide a service to the community and replacing them will be a long time with the mountains of administrative work that must be done.

Again, my concern is the return of the signs. I do not intend to prosecute, nor do I intend to turn over to the police those persons who return the signs. If you have any information regarding the signs please contact me at 961-2975 or 968-6641.

Local Geography Heighens Fire Peril, Researchers Find

When it comes to brush fires, geography works against hillside residents of the Santa Barbara California coast. A research team at UC Santa Barbara has found that the growth rate of the chaparral which fuels brush fires is double that of chaparral to the north facing Santa Barbara because of the cool, moist ocean air, enhancing fire potential.

With so little resolution to this problem, the scientists view fire as a natural occurrence. Where there is chaparral and a Mediterranean-type ecosystem characterized by cool, moist winters and hot, dry summers, there are bound to be periodic fires. And lightning strikes make reports that the height of the fire season arrives in the fall.

What to do then to minimize the possibility of fire? Restoring the natural fire cycle is the key, but controlled burning is an appropriate policy in the back country. But Schlesinger discounts burning as too risky a policy of periodic attempts that are only 25 percent effective in preventing fires.

The research, Schlesinger and his colleagues have been studying 11 nearly pure stands of the most common chaparral in the Santa Ynez Mountains, the Chasertasmeguscarum. The stands are as too risky a policy of periodic burning on the Santa Ynez range located in areas burned in the fall.

Another aspect being carefully examined is the amount of nutrients available. An increase in nutrient deposition of important plant nutrients and the release of nutrients through the decomposition of dying plant parts. The researchers have concluded that the rates of decomposition appear adequate to prevent nutrient deficiencies in most areas of the chaparral of the Santa Ynez Mountains. This may enhance chaparral growth.

The National Science Foundation has funded the research for two years so far. Among the notable results are negative feedbacks and a self-regulation, as in periods of overgrowth and overproduction.

In addition to Schlesinger, the researchers include graduate students John Gray and David Gill and research assistant Maria Hassey.

Education Abroad Highlighted

At Nov. 27 Affiliates Program

The UCSB Affiliates will hold a dessert and coffee at 7 p.m., Nov. 27, in the Rita and Walter Film and talk about the University of California's Education Abroad Program.

The program, which is headquartered at UCSB, offers students from all UC campuses a chance to study abroad through 46 host universities in 19 countries, four of which are in Brazil. The program is headquartered in Konstanz, Germany.

The program is open to any interested persons inculding faculty members through the additional nominal charge of $2 each. Reservations should be made by calling the Affiliates office at 961-7234.

Dr. D. Kline, an associate director on the EAP administration board, will talk briefly about the growth of the UC program from 1961, when it began with just one study center located in Konstanz, Germany, to its current headquarters in Konstanz, Germany.

A 30-minute color sound film, "Human Values in International Understanding," produced by university students, will be shown. There will be a panel at work in several foreign-study offices.

Arrangements for the program are being made by Mrs. Guy C. Cali, director of university development, Mrs. Julia G. Cali, director of university development, Mrs. Konstanz, and Mrs. Ralphland Sanders, director of university development.

The program is open to all university members and others in the community on an equally-opportunist basis.

Opinion in China Finds Many Directions, Professor Liu Notes

An irony of China and other totalitarian states is that while suppressing most outlets of public expression, the government pays close attention to such opinion — and sometimes acts to accommodate more public expression.

This is the observation of political scientist Alan Liu of U.C. Santa Barbara in a study titled "public expression in China," which is being prepared for publication as a paper at a conference at the East West Institute in Honolulu.

How is public opinion divided in Chinese society? Where there are binding independent polls and where the government is strictly controlled by the governmen.

One way, Liu says, is by observing the mood of people in the streets and factories. Are they angry, unhappy, and cooperative, or are they restive and in favor of trustworthy and credible information? It is extremely difficult for the government to make sophisticated tapping for reading between the lines of official releases.

An additional form of public expression has surfaced recently and is flourishing in China for the first time since 1966 in underground literature. Liu attributes this to the widespread weariness and discontent in official reports of policy reversals and "ideological policing" couched in local and regional language.

A long-range study of public opinion in communist China, the political scientist professor notes a relationship between the intensity of its expression through wall posters, letters and demands and the degree of control of the Communist Party. The more, the less the freedom of the Party. The more, the less the freedom of the Party.

As an example, he offers the "flowers bloom as well as the Contending" campaign of 1979 in which college students at Peking University and other universities were admitted for political reasons to participate in a study tour of Germany.

The ruling party means us to try to generate "tides" in support of the party. And disputes factions within the party will take the form of which side controls for a certain period for their support for their views.

In a nation where independent opinion polls are held and where alternate routes to socialism by concrete or indirect paths are not to be taught as a separate academic discipline, the wall poster is not kept as an internal bulletin for ex- pansion, but its existence means "shift" among modern totalitarian countries.

Jochim on Study Tour

Dr. Michael Jochim, assistant professor of anthropology, will participate in a study tour of Germany.

The trip will take Jochim to universities in Bonn, Berlin, Darmstadt, and Munich.

Dr. Jochim has conducted ar-.
Drake Resigns Post

(Continued from p.1)

committee members were unavailable for comment at press time. "I chose to resign because for better or worse I've identified with a certain attitude on college education," Drake explained, "I think the committee has made a decision I just can't agree with."

"The quality of your degree depends on the quality of your education. They (the other committee members) are cheating students. Their degrees will be worthless," Drake said.

The P.A. department currently receives approximately $380,000 in state academic funding. This funding is justified because students received credit for P.A. classes. Vice-Chancellor Ed Birch explained that P.A. instructors were paid for the time they spent teaching classes from these state funds.

However, those instructors who also act as intercollegiate athletic coaches receive pay for their coaching from the $800,000 registration fee for the intercollegiate athletics department.

This means that instructors who both teach P.A. classes and coach receive their salaries from two different sources. If academic credit were removed from physical activities then another source would have to be found to pay P.A. instructors. This could come in the form of charges for P.A. classes.

Birch said that the administration had no say in whether academic credit would be given for P.A. classes but that he and Richard Jensen, assistant chancellor for planning and analysis, had made a presentation before the executive committee concerning the reality of funding for the P.A. department.

Birch claimed that the "best of universities world-wide" award is "worthless," for these classes. "That doesn't mean we have to but we ought not to think that in order to be a pure institution, we shouldn't include these classes," Birch commented.

Drake said that one of the main points Jensen and Birch brought before the committee was that other major universities do give credit for such classes, but he added "they don't have to submit their athletic department as happens here and a number of these other schools aren't facing the same budget problems the University of California is."

If the committee does approve the continuation of academic credit, the issue will not stop there according to Drake. The proposal will also have to go before the Committee on Educational Planning and Academic Policy because it deals with budgetary manners and the Committee on Undergraduate Courses. It could go as far as the Faculty Legislature for a vote.

Drake Forum Held

(Continued from p.1)

Flynn said, adding that it is a "totally incomprehensible." "I chose to resign because for better or worse I'm identified with a certain attitude on college education," Drake explained, "I think the committee has made a decision I just can't agree with."

"The quality of your degree depends on the quality of your education. They (the other committee members) are cheating students. Their degrees will be worthless," Drake said.

It could go as far as the Faculty Legislature for a vote.

Discussion on Iran

(Continued from p.1)

American children prefer Tang to L.N.G.
The students of the group who attended the forum are members of the student action group which they stress the need to take action both in the form of letters and non-violent shaming of a "public nuisance." The door is open, maybe only a little bit, but it will open." Dubin said.

A large portion of the group's discussion focused on the recent United States Geological Survey report, which has revealed the possibility of more faults at the Point Concepcion area. UCSB geologist William Prothero explained the situation which now exists. "Faults which were previously thought to be small have now been found to belong segments," which may have more potential for earthquakes, Prothero said.

Corey Dubin, member of the Citizens to Protect Point Concepcion also spoke out on the issue discussed were agreed upon with the Persian Students Association. Professor Richard Flacks, chair of the sociology department and faculty advisor to the Persian Student Association, was chosen as moderator of the forum to relieve any possible tensions between the two groups and to lend formality to the event. Said Tunney, "None of us were

UCSB geologist William Prothero explained the situation which now exists. "Faults which were previously thought to be small have now been found to belong segments," which may have more potential for earthquakes, Prothero said.

Corey Dubin, member of the Citizens to Protect Point Concepcion also spoke out on the issue discussed were agreed upon with the Persian Students Association. Professor Richard Flacks, chair of the sociology department and faculty advisor to the Persian Student Association, was chosen as moderator of the forum to relieve any possible tensions between the two groups and to lend formality to the event. Said Tunney, "None of us were

Last Saturday evening in Campbell Hall, the soprano Victoria de los Angeles delighted us with an evening of her charm and beauty in interpreting Catalan, Spanish and German composers. Her sensitive perception of the infinitely diverse demands of interpretation of style, character, timbre, and especially rhythm led the audience willingly through three centuries of musical styles.

The program included five sections. The first consisted of a Minuet Cantando, by Domenico Terradellas. This last work was a particularly versatile Catalan songstress, Victoria de los Angeles.

The second section of songs, Cinco cores, included an aria from Bizet’s Carmen, excellently concluded an artistically fulfilling evening of beautiful vocal music. It must be added that the pianist, J. Basso, even further, but overall this dynamic range of these pieces

The final section of songs expressed a depth of dimension of abandon and understanding and artistic refinement now often absent upon the stage. Especially notable was the delicately portrayed woman’s life and loves. De los Angeles’ interpretation of these eight poems expressed a depth of understanding and artistic refinement now often absent upon the stage. Especially notable was the dedicated portrayal seen in the presentation, with its ornate runs and melodic twists.

Another vocalist in the program was the versatile Catalan songstress, Victoria de los Angeles.

They Call Him Coach... Of the Year

By ERIC RODNA

Pete Snyder, named PCAA water polo coach of the year by his fellow coaches in the PCAA, was as modest as he could be about the honor.

"It's certainly an honor to have other coaches in the league think highly of you," Snyder said.

That just typifies his modesty, his cool, collective attitude, that is offset during games and practice by his hardlined, vociferous yelling and screaming.

Snyder is the epitome of a coach. He is a martinet and pussycat rolled in one. He swims softly and carries a big record, 20-2-1.

Low key during interviews, at games Snyder can make Don Rickles blush, turn the pool into a screaming, shouting, hating, loathing Calvin Coolidge debate. After the game, he is a minister, quiet and soft-spoken, with modestly flushing his great accomplishments.

He is the sort of guy who wouldn't just walk an old lady across the street - he'd walk her a cab.

This Saturday and Sunday in Long Beach, in one of the finest pools in the country at Belmont Plaza, Snyder and his crew of water poloists play in the Nationals, where the finest teams in the country will vie to determine the best team in the country. CSB, 9:30 FM will broadcast the game live.

Snyder's team is seeded third in the tournament, behind number one seed Cal (36-4) and number two Stanford (32-4-1).

UCSB will face Loyola of Chicago on Saturday. Their fate rides on the Stanford game in the second-round, Tuesday.

Stanford is Snyder's old alma mater, but might turn out to be his bête noire. When Stanford and UCSB splashed off this season in their first meeting, it ended in a 4-4 tie. Later in the season, in Palo Alto, the result was even more of a setback: Stanford whalloped the Gauchos 15-4.

This time could and should be different, according to Snyder, because the Gauchos learned from their loss. That game up to Palo Alto wasn't a total waste. We got a good look and know what to expect from Stanford.

PCAA teams could tell the Cardinals to expect a peaked and psyched up Gauche club. The Gauchos beat the trucks off several teams in the PCAA finals, including a lugging to the Irvine Anteaters, 9-4.

What is Snyder's secret of coaching? How does a coach develop great players into the greatest?

Colhezione is the answer. The Gauche water polo squad goes along better than corded beef and rye, than steak and Lowenbrau, or even faunas and beer.

"Our goal was to make it to the Nationals and place as high as we can," Snyder commented.

They call him coach, but you have to know Peter Snyder to know he is more to his team than the

Coach Pete Snyder

"I try to be consistent. I just say the same thing for the whole season; I try not to single out any particular player. I just wish I could spend more time with my players. I hope they do well in their athletic, personal and school life."

This water polo team, has been ranked consistently this year in the top three, including some number one rankings. Snyder handles this problem maturely.

"You want them, your team, to be confident and somewhat cocky, but certainly not complacent.

But the biggest obstacle remains a team in the Nationals: Stanford. It is Snyder's old school, as he coached the J.V. water polo team there and also graduated after playing varsity water polo.

The rivalry continues when you research that the coach (Dante Dettamanti) in Palo Alto recruited many of the seniors that are now playing for Snyder. Dettamanti's 1976 UCSB team finished fourth in the Nationals and first in the PCAA.

That legacy might fallow Snyder, and he is striving for that one goal himself.
San Diego State Site for Women's V-Ball Regionals

UCSB will carry a 26-12 record into the WIAW (Western Intercollegiate Athletics for Women) volleyball Regionals scheduled for this weekend at San Diego State.

Friday at noon, the Gauchos meet the University of Pacific in a first round match. Pacific has beaten Santa Barbara twice this year, first in a non-league match into the WAILER (Western Athletic Intercollegiate League) Regionals scheduled for this weekend at San Diego State. The Gauchos have struggled on the road this season.

But Gaucio coach Kathy Gregory is spoiled with the draw. "Physically Pacific has the best talent of all but they haven't been in the regionals before," pointed out Gregory. "I like our odds."

The Gauchos will face either the winner or loser of the UCLA-San Diego State match depending on the outcome of their match with Pacific. The Regionals are a double-elimination competition with three or possibly four teams advancing to the Nationals Dec. 8-9 in Carbondale, Illinois.

Santa Barbara captured their third straight SCAA crown this year with a 9-1 league mark. Upset wins over UCLA, Pepperdine and Long Beach State helped land the Gauchos in the Regionals.

Other first round pairings for the Regionals include top-ranked UCLA vs. Pepperdine, USC vs. Pepperdine and UCSD vs. Long Beach State.

National Breakdown of Scores

By MEG JOHNSON

Last weekend, three UCSB cross country athletes, Julie Thrupp, Mellissa Martel and Gigi Camillo, ran a mental steeple chase as well as a long distance course.

National competition in a high class affair, right? Wrong. At least, not at the WIAW Women's Cross Country National Championship in Florida.

Officials had no back up system, so when computers for timing and scoring broke down, many coaches went home late, angry and embarrased because they had no times for their athletes and couldn't even be sure of their places.

In addition, the runners ran what looked more like a road race than a true cross country course. A few runners fell, starting among the very crowded quarters. In Division II alone, there were 207 entries.

"It was hot. It was a quick start on grass and sand and it was hard to get good footing," coach Elaine Campo said. All the runners were prepared for the race by going over the course once or twice but the field was so packed that they didn't have the option to pick what part of the track they wanted to run.

There were other obstacles to hurdle for the UCSB three. They had been lacking a coach until six weeks ago and couldn't train properly in such a short time.

When they got to Florida, their coach, Campo, could not run with them during their practices and had to be content with training from the sidelines suffering from pain in her pleural cavity.

Because the UCSB runners were entered as individuals, they were assigned their starting positions by free draw. By luck, Martel and Thrupp started next to each other, but Camillo had to look through the crowd for her teammates.

Martel went to the starting line knowing that she had injured her foot a week before. She ran the race in pain Saturday and by that same evening was in a wheelchair with a stress fracture in her fourth toe.

In the competition, Thrupp finished 9th, Camillo 8th and Martel 6th. Those sound like high numbers but actually places them among the top third of the runners in the U.S.

"It was tough for them because of the crowded talented field. I'm happy with their places," Campo said.

Huerta Speaks on Farmworkers

(Continued from p. 1)

Although a UFW leader, Huerta said that she and all other members only receive $10 a week government allocated food stamps. This, she claimed is the only way the UFW can work effectively.

Currently, 2,300 farmworkers are engaged in a strike which began ten months ago. UFW advocates the boycott of Iceberg lettuce and Red Coach lettuce. They are also boycotting Chiquita Sunharvest Lettuce. The only acceptable lettuce, Huerta said, is that which bears the eagle on the label.

Huerta said that fourteen lettuce companies have refused to sign contracts identical to those that UFW has with other companies. Red Coach is the main target of the strike and Huerta said that since the strike began, five workers have been killed. There were those that were decapitated, she claimed.

According to Huerta, in Sacramento there are 30 laws against the farmworkers. She said that it took ten years before workers could get certification allowing them to hold elections.

Decertification of contracts allowing owners to contract with non-unionized farmworkers is the subject of one bill. The bill also makes the usual two-year period for union contracts ineffective.

Employee grievances is the subject of another bill. In the past farmworkers could simply report grievances to labor authorities, thus the bill proposes that workers sign papers concerning the legality of their status as citizens before filing grievances. UFW considers this bill to be discriminatory against the undocumented workers.

Huerta also discussed the accomplishments of Chavez. She said that he was a "grammar school dropout," but historically he was the first person to unite farmworkers. Huerta cited Native Americans as the first farmworkers. They were followed by the black slaves from Africa, the Chinese, the Japanese, and finally and still, the Mexicans.

Currently UFW has programs that give medical services, and a credit union. Chavez is now touring the country, trying to get support for the UFW. Detroit Mayor Coleman Young supports the strikers and the state of New York has also pledged support, but according to Huerta, California has done nothing.

UFW members and supporters have written letters to local legislators urging action on behalf of the farmworkers. Huerta was happy to announce that local assemblyman Gary Hart came out favorably.

Santa Barbara Rally

(Continued from p. 1)

a lake. "We have to get the agricultural zoning back," Bickford continued.

"Yager lied on three crucial points. He said the land is not agriculturally suited. But, Simonsen (the developer/confidante) has 26 acres of lady's breath doing so well that he's dug up and planted another ten acres, totaling 30 acres. Squash and tomatoes flourish in the area. Corn, avocados and field flowers have also been raised on the land over the last 15 years."

"Yager misinformed the public about availability of water. President of the Goleta Water Board, Donna Hone, and the manager of the Goleta Water District both have gone on record saying there is no water available for residential development of the land," said Bickford.

"Pimlently, Yager insisted that a site-specific development plan for More Mesa doesn't exist. But, Yager's approval of Wallace's demonstration for the press and demonstrations the precise development plan that Yager denies exists. Bickford termed Yager's approval of Wallace's motions a move to "save face from the irresponsibility of the previous week. His vote today was a political one, with the hopes of getting the environmental vote in June."

No more public testimony will be taken by the Board of Supervisors, on the submitted and approved Local Coastal Plan. The next move is for the LCP to the Central Coast Coastal Commission for public review in February, 1980.
