

Appendix 2, Figure 1: 1. Summary of geologic events for the India-Asia orogen relevant to the Pamir, Tibet, and Himalaya. A) metamorphism, B) plate-scale processes, and C) magmatism. The ages of meta-morphism (A) in both the Pamir and NHGD coincide with the timing of slab tearing and convective removal of the lower crust. 1. Searle & Szulc, 2005; 2. Godin et al., 2006; 3. Lee & Lawver, 1995; 4. de Sigoyer et al., 2000; 5. Replumaz et al., 2010; 6. Copley et al., 2010; 7. van Hinsbergen et al., 2011; 8. DeCelles et al., 2010; 9. Nábělek et al., 2009; 10. Kohn & Parkinson, 2002; 11. Negredo et al., 2007; 12. Chung et al., 2003; 13. Chung et al., 2005; 14. Malz, 2011; 15. Guillot et al., 1999; 16. Cottle et al., 2009; 17. Lee & Whitehouse, 2007.

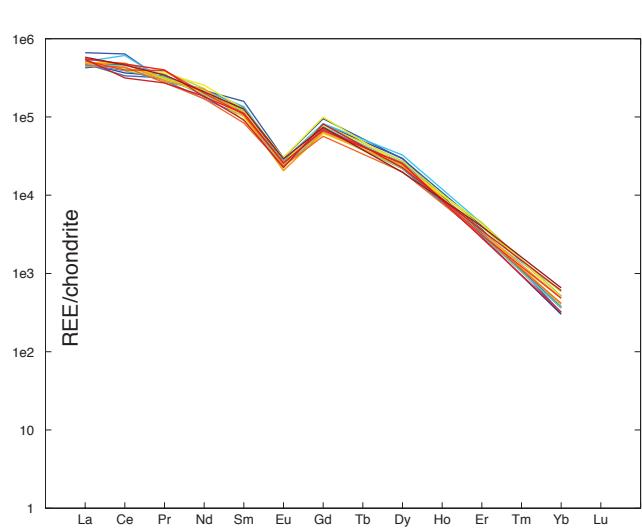

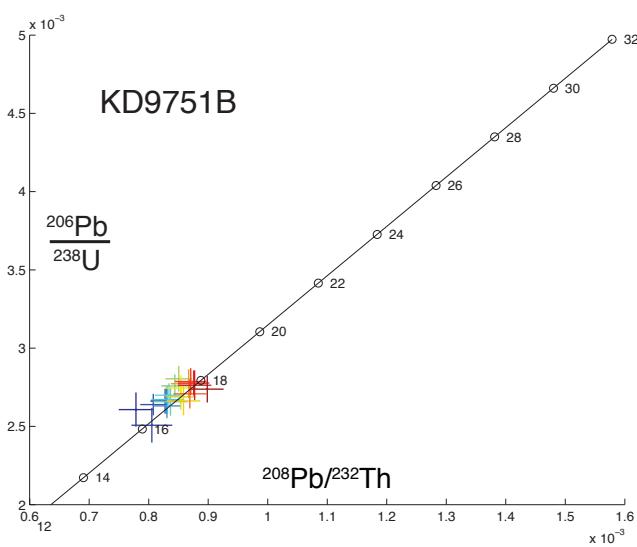

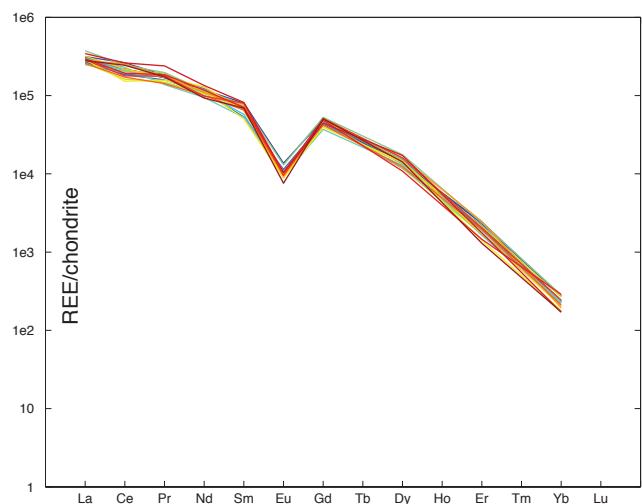

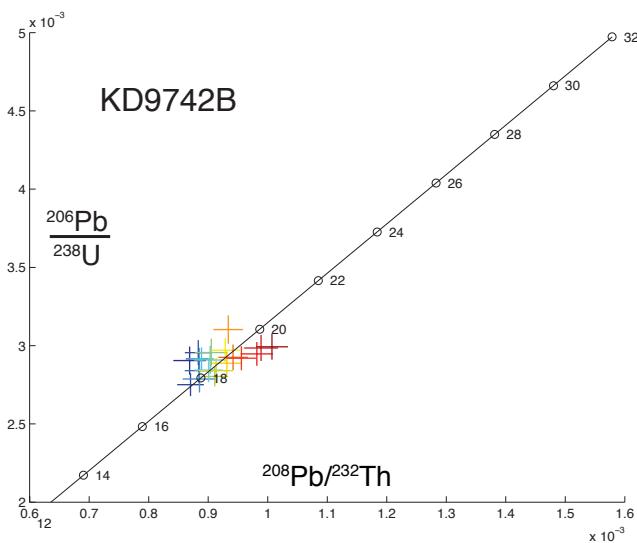

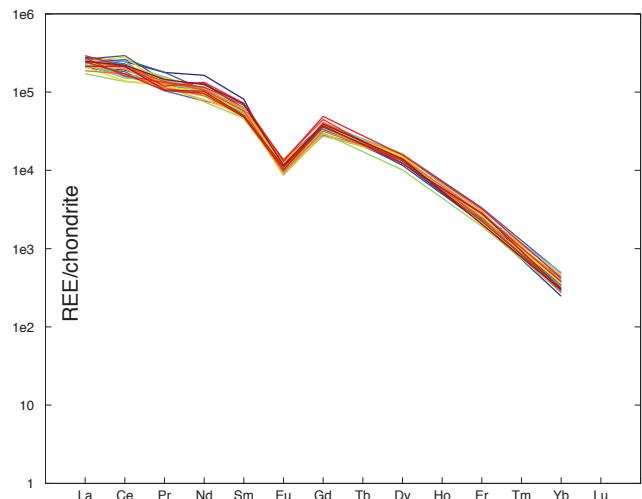

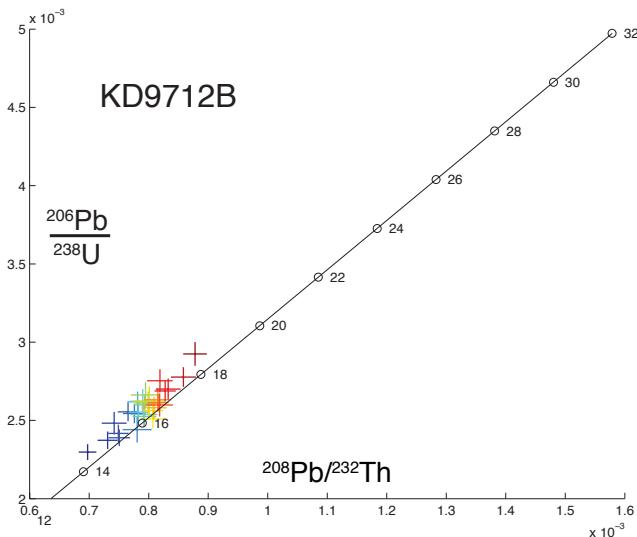

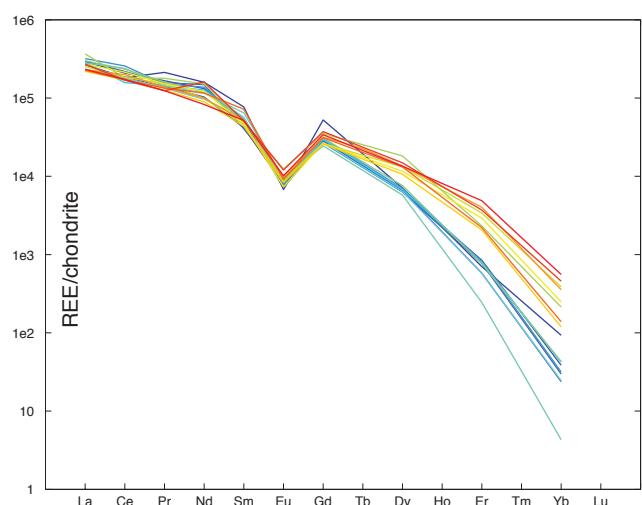

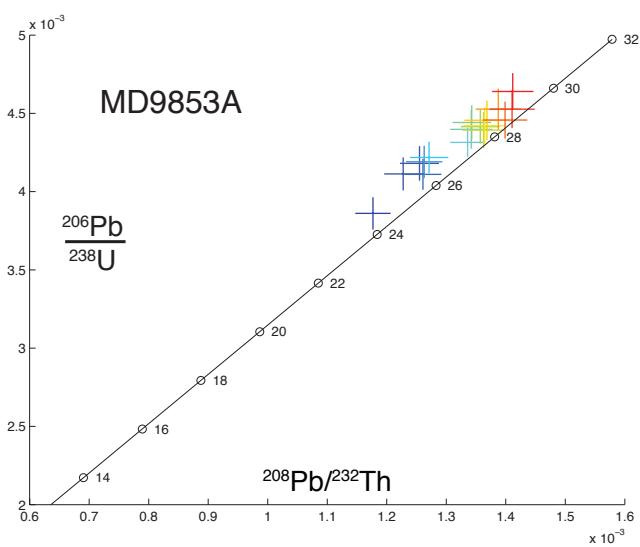

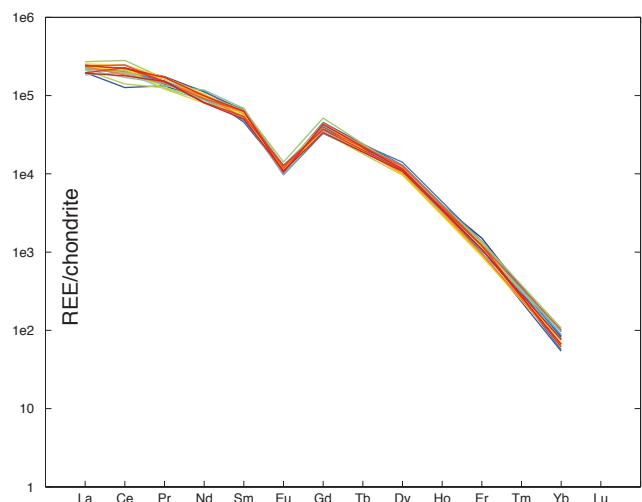

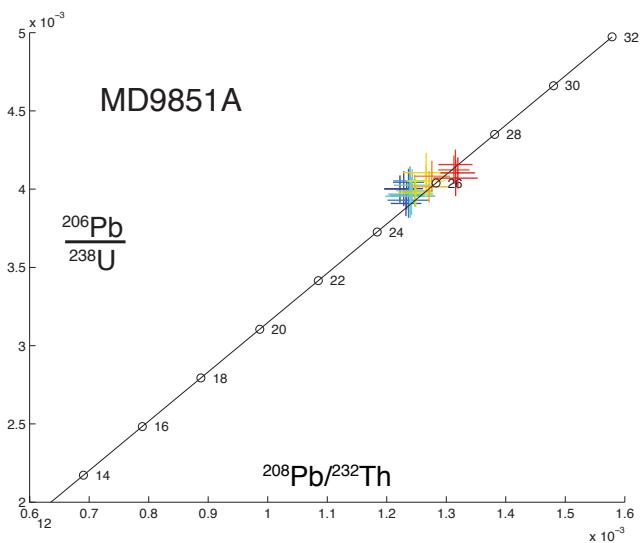

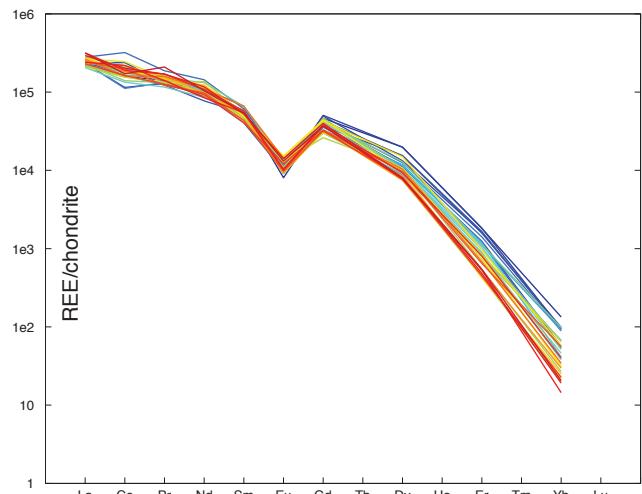

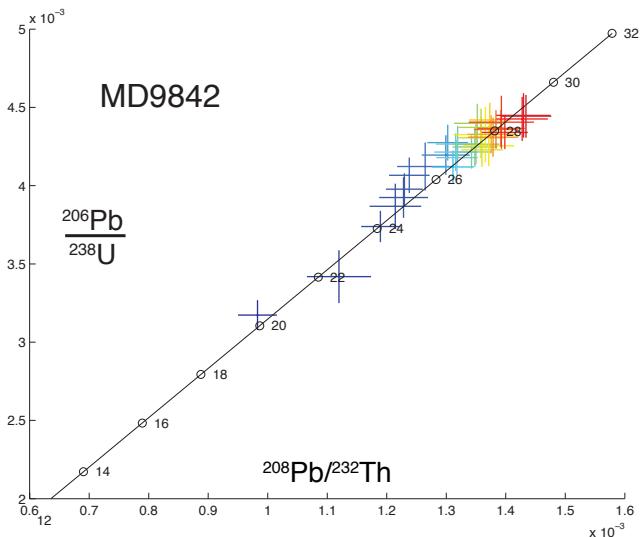

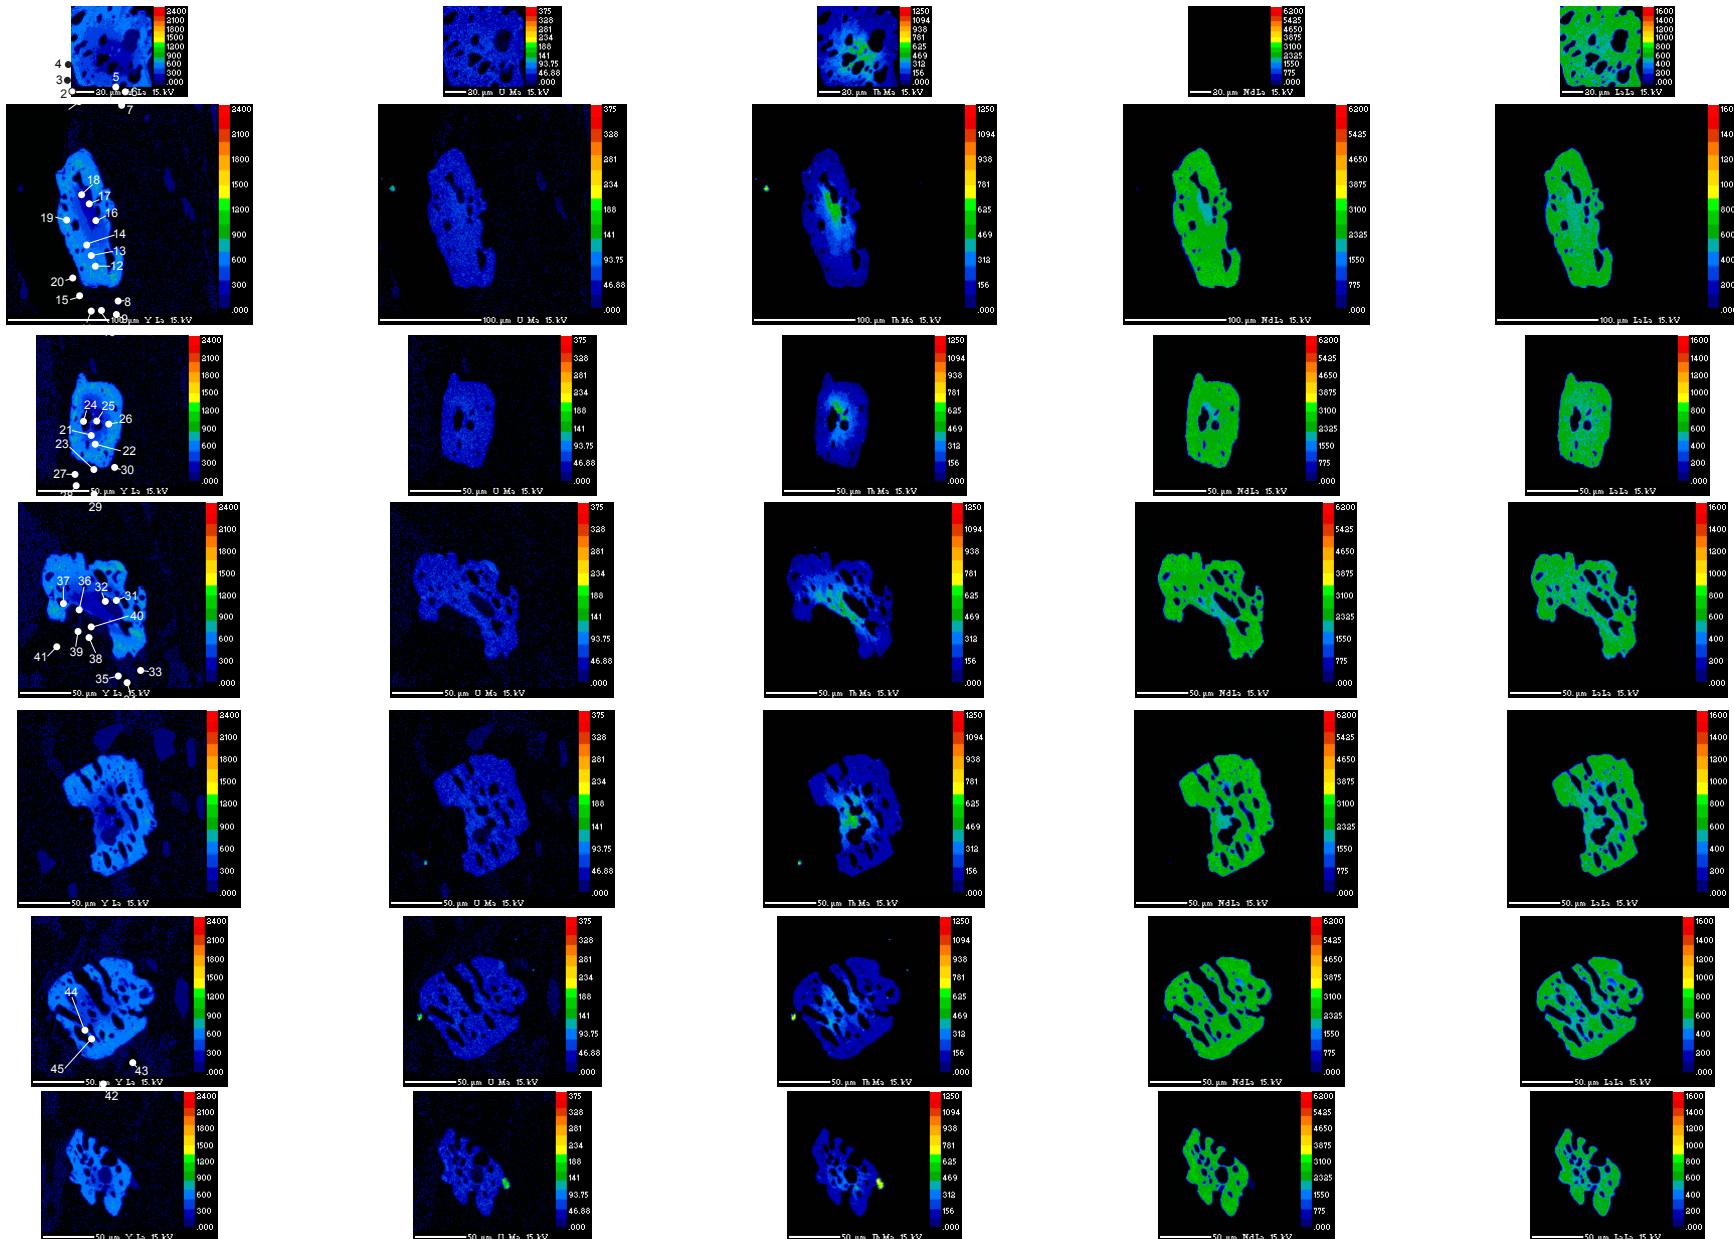

App 2, Figure 2a: U-Th/Pb concordia and chondrite-normalized rare earth element (REE) spider plots for each sample. Data on both plots are colored by  $^{208}\text{Pb}/^{232}\text{Th}$  date from low (blue) to high (red). Tb, Ho, Tm, and Lu were not measured for Mabja and Kangmar samples. For these samples, line plots were interpolated where no data exist (Tb, Ho, Tm) or not plotted (Lu). Kernel density estimation (KDE) plot and histogram of the Pamir (red) and NHGD (blue)  $^{208}\text{Pb}/^{232}\text{Th}$  dates were generated using DensityPlotter (Vermesch, 2012).

Figure 2b, the Yb/Gd ratio was calculated from chondrite-normalized values to quantify the slope of the heavy rare-earth elements using a manageable value. Each sample was then shifted so the mean of the five oldest data per sample lay on the “zero” line. Since each sample is shifted by a different amount, the y-axis of Figure 24b cannot be quantified between samples. Using this scheme, an invariant HREE slope through time would scatter about the “zero” line. If the Yb/Gd were not invariant, the value would lay above or below the line. The space above the “zero” line represents HREE enrichment, i.e. a shallower slope of the spider plot. The space below represents HREE depletion, or a steeper HREE slope for the spider plot.

App 2 Figure 3: X-ray intensity maps of Y, U, Th, Nd, and La in monazite. The scales located to the right of each map are in total counts and are globally scaled for all grains and samples. Length scales are labeled on each map. Laser spot locations are marked where appropriate, and some holes in grains are ablated spots.

**Table DR1. U/Th-Pb isotopic ratios and REE concentrations (ppm). Sample region, dome, name, long., lat., rock type, and mineral assemblage are given above each. U/Th-Pb ratios are uncorrected for common Pb and REE are un-normalized. REE Tb, Ho, Tm, and Lu were not measured for north Himalayan samples. When not measured, elements were log linear interpolated for REE spider plots.**
