Military Organization of Switzerland.

Switzerland and Prussia stood at present the two leading nations in European military organization. The following account of the military organization and forces of the former country will, therefore, be given in greater length than that of the latter.

Within the last ten years, Switzerland has been in a state of active development, and has invested a large sum in the improvement of its army. The network of roads and railroads which has been formed has enabled the troops to be moved with greater rapidity than ever before, and the training of the men has been improved by the introduction of new methods.

The army of Switzerland consists of the armed forces of the cantons, and is composed of all citizens who are between the ages of 18 and 45 years. Each canton is required to furnish a certain number of men, according to its population, and the federal government provides the necessary equipment. The cantons are divided into districts, and each district is under the command of a general officer.

The training of the army is carried on in the canton schools, which are established for the purpose of instructing the young men in the art of war. These schools are supported by the cantons, and the federal government provides a certain amount of money for the maintenance of the schools.

The army is divided into two branches, the line forces and the mountain troops. The line forces are stationed in the mountains, and are employed in the defense of the borders and the main lines of communication. The mountain troops are stationed in the cantons, and are employed in the defense of the interior.

In war, the army is divided into three divisions, the left, center, and right, and each division is under the command of a general officer. The army is equipped with modern weapons, and is well trained in the use of them.

Some years since, the State of Ohio imported from Great Britain a large quantity of arms and ammunition, which was received with much alarm by the people of the United States, who feared that it would be used against them. The arms were, however, never used, and the transaction did not produce any evil consequences.

Let us have no useless slaughter, and no attempts to elevate the rout of the thesis feeble, and, if we must make war, let it be a war for freedom and humanity, a war to put Brazil back in a provisional position, with the result of showing to the world that we are not a nation of men who are content to be governed by a foreign power as if it belonged to the enlightened nations of Europe. Let us see that we make war on the principle of self-defense, and that we do not make war on the principle of aggression.

The benefit of the mountain troops is the federal shooting festival, where the sharpshooters of each canton are required to take part. The festival is held in the capital of Switzerland. This year, the festival will be held on the first of May. Two events, each composed of several States. One event is called the Brazils, and the other the Flask of Blood. These events are familiar to all our readers.

The growth of Brazil may be said to have been formed by the annexation of the province of Paraguay, from France by the Peace of Paris, in 1856. The annexation gave the Brazilians a free hand in the interior of the country, and they have made use of this free hand to improve the condition of the people and to increase the wealth of the country.

The annexation was followed by a period of peace, during which the Brazilians have been able to apply their resources to the development of the country. They have built a large number of railroads, and have improved the harbors. They have also established a system of public education, and have encouraged the arts and sciences. The result of these efforts has been to improve the condition of the people and to increase the wealth of the country.
