The senior gift design judging committee met Thursday to choose among three scale model entries. This pyramid sculpture by David Trowbridge was chosen by the committee to represent "hope for International Peace in this Olympic year 1984."
State

Diablo's Fault

Los Angeles — The Hoover earthquake fault may pass directly under Diablo Canyon Atomic power plant, instead of three miles offshore as formerly thought, a Nuclear Regulatory Commission spokesman was quoted Thursday.

The $9.9 billion plant, target of anti-nuclear protests, has been undergoing low-power testing and hasn't yet become fully operational.

Until a new interpretation of the geology near Diablo Canyon was published last month by three San Diego scientists, it was assumed that the Hoover fault was vertical and no nearer than three miles, but their study says Hoover may be a "thin fault" slashing diagonally under the plant as close as one and a half miles deep.

Sacramento — Senate Democrats denounced Gov. George Deukmejian Thursday for standing by an appointee who killed a 12-year-old girl and then murdering her and her brother by repeatedly hammering and stabbing them.

"Some of us are deeply concerned when the governor's appointees start suing the president of the Senate," Lockyer said. "The only appropriate response may be not to approve any appointees of the governor until it's resolved.

San Francisco — A prosecutor in a murder case can seek to remove jurors who have reservations about the death penalty, the state Supreme Court ruled Thursday in upholding a double murder conviction.

The verdicts became a state law requiring a judge to impose a penalty without parole sentence when the jury deadlocks on the penalty in a capital murder trial.

The case involved William Zimmerman, convicted of raping a 12-year-old girl and then murdering her and her brother by repeatedly hammering and stabbing them during a burglary in April 1978.

San Jose — Top city officials were sworn 17 months before losing $65 million in the bond market that some investment records were so lax auditors could not discern gains or losses, a check of city records showed Thursday.

Some transactions were marked out routinely on a desk calendar, officials said.

Trout in the city's top money managers and a lack of sophistication by those outside the city treasury may have contributed to the crisis in the months following a January 1983 audit, said City Manager Jerry Newfarmer, who was hired in mid-1983.

World

Four Guardsmen Convicted For Nuns' Murders

Zaratezocula, El Salvador — After a 28-hour trial, a jury convicted five former national guardsman Thursday of killing four American churchwomen whose deaths in 1980 became a rallying point for opposition to the Salvadoran government in Nicaragua.

The murders became a symbolic tipping point in the country's widespread human rights abuses and the U.S. Congress has withheld its aid for El Salvador.

The case involved John William Zimmerman, convicted of raping a 12-year-old girl and then murdering her and her brother by repeatedly hammering and stabbing them during a burglary in April 1978.

Students Question Local Candidates During Forum

By EDDIE SANDERS
Assistant County Editor

and

DEBBIE NESTOR
Nexus Staff Writer

Local candidates for the Santa Barbara County Board of Supervisors and the South Coast judicial seats spoke out on the issues before students and members of the campus community at a forum at UCSB Thursday afternoon.

The candidates answered questions from representatives from the Daily Nexus and a small, but interested, audience in the UCen before students and members of the campus community at a forum at UCSB Thursday afternoon.

The candidates and audience were interrupted by a bomb threat but the audience moved from Campbell Hall to Storke Plaza where Stockwell spoke in the dark.

"The responsibility of the CIA is to keep the world unstable. The reason is that we make so much money. Our economy is so dependent on the production of arms," Stockwell said.

"The CIA has trained torturers and assassins," said Stockwell.

"We never issued a statement that was true. We lied to Congress," Stockwell said. He explained the official name for mercenaries was "foreign military technicians" and the prostitutes assigned to get information from foreign officials were "special access agents."

The language used by the CIA never implies the reality of their actions, he said. "The biggest problem is that the CIA never uses the word spy."

Organization.

John Stockwell spoke to about 700 people at UCSB Wednesday night on the internal and external wars of the CIA. The lecture was interrupted by a bomb threat but the audience moved from Campbell Hall to Storke Plaza where Stockwell spoke in the dark.

"The responsibility of the CIA is to keep the world unstable. The reason is that we make so much money. Our economy is so dependent on the production of arms," Stockwell said.

The language used by the CIA never implies the reality of their actions, he said. "The biggest problem is that the CIA never uses the word spy."

"The greatest con of all is the use of patriotism to induce the young men to go and participate and fight and kill in these things," he said. Stockwell was con

fined by the CIA in 1964 when he decided to join them because of his sense of patriotism, he said.

In the beginning years he often questioned their actions and was told by his superiors that he didn't know enough to understand. When he became an adviser to the NSC he saw that the agency was corrupt from the top, he said.

For eight years he has written, lectured and travelled in Central America.

Letters

Barb L
Editor, Daily Nexus:

I was asked to respond briefly to the article "Mind at Large" by Bart Brown in your Thursday, May 12 edition of the Daily Nexus. As much as I would have liked to respond to personal attacks in a personal way, I believe it is necessary here to discuss the issue.

First of all, I question the writer's use of labels, specifically, using political labels, to classify my people. My views on Nicaragua are the result of three weeks that I spent in that land speaking to everyone from peasants to city-dwellers, from children to senior citizens. Overwhelming support for the Sandinistas is indisputable. Equally important, however, is the confidence and ease with which those with whom I spoke identified with the Sandinistas discussed their daily lives.

My views on the arms race are based on the feeling that military expenditures totalling over half of the federal budget, while more people now than at any time since the depression are living below the poverty line, is a flawed expression of warped priorities. My views on this subject, however, are other meanings that the author is alluding to. I would prefer that he spell them out, rather than use that open-ended term open for interpretation.

Secondly, the writer states that I "used A.S. fees..." to organize a series of educational events on Central America. To clarify the situation, I presented a budget to the Legislative Council Committee on Senate Business for $200. After examining the budget, they approved it. Shortly thereafter, we requested and received another five hundred dollars from the State Of SoSe. I offered the same series of educational events that would be returned to the Administrative Student Senate. We received $1,000, all of which was returned. So, with Legislative Council Committee approval, I spent $200. As an aside, this budget was also supported by numerous other organizations including the Status of Women and El Camino Feminists Student Board. Financial help from groups outside Leg Council took place as well.

Finally, in regard to the burning of books issue, my car was left with the rear window broken and notes left on my friend in the passenger seat concerning student organizations and the law.

Barb L

Greeks

Editor, Daily Nexus:

In a letter to the editor on Friday, May 12, Richard Beaver stated: "Editor, Daily Nexus readers that the Greek community is responsible for the underhanded Greek modus operandi by participating in a signature drive for a recall election of Goleta Valley Water Board member led by Jerry Beaver. I agree with the saying, "to overcome ignorance, one must first recognize it," but one does not have to publish it. Richard, Jerry Beaver and the Greeks are in ignorance because you fail to understand that the name you label the Greeks slanderously, and spew poorly paraphrased democratic theory to account for actions of the Greeks.

In attacking the Greeks you are neglecting the issue. The issue you are complaining about is the recall decision by the California Elections Committee, (CEC), that paid signature drives are legal. The focus of your attack should be on the CEC, or more appropriately, Jerry Beaver, the organizer and financier of the signature drive. Why you fail to focus your "fervent disgustment" with the CEC and Beaver is simple: you are afraid of the truth or that you blame the Greeks is obvious. A cure for this "plaid clad gal" of a girl approached you, not Mr. Beaver or members of the CEC so you naturally directed your pugnacity toward the Greek community. God forbid you would be "watched" if another student group approached you for a signature.

In ignorance permeates the article by slainman labels of the Greek community as "radical" and politically ignorant. Nowhere on campus, the local municipal level, or the federal system will you find an organization as democratically run and dedicated as our democratic fraternities and sororities of a college campus.

By saying that "Daryl La feels little for democratic institutions," when Daryl is the president of the Phi Sigma Kappa, you are ridiculing at best. Every decision, financial or otherwise, affecting any member is decided by a majority of his fraternity. That is more than we can say for the Administration or student government on this campus.

Your limited "invesigation" of Greek motives behind the paid signature drive was just that. It consisted of, as you told us, one "plain clad gal" who approached you. Stop assuming what Greeks think and what Greek motives are and actually interview more than one. By not doing so, you are supporting a system that allows the populace to decide what is appropriate at the ballot box; the most democratic element of our modus operandi. The fact is you, Richard, label and categorize all Greeks as Greek, plaid clad financial managers, is reflective of our immaturity proprely jump on the wagon of anti-Greek sentiment that has recently plagued this campus.

Before you cite shallow and simplistic democratic theory throughout your article, you must feel compelled to enlighten you. Richard, the lack of realities of contemporary democratic theory is replete in your labeling of the Greeks. Democratic theory is partly based on the fact that democratic organizations exist in a "competitive" setting. You can not separate, as you did, Richard, our democratic modus operandi from our capitalist system and its economic incentives. All one has to do is look at PAC's, interest groups, referendum initiatives drive like Prop. 13, and Congressional fundraisers to see that economic incentives are used to gain political ends. So as this brings me to, it is in the reality of our democracy.

So it is not the actions of the Greek community that are idle; yours in mindreading, misjudging, and misstating your accusations upon the Greek community. Use what little intelligence this University has milked out of you, and think about what the issue is.

Opinion

Let Us Know What You Think

Editor, Daily Nexus:

What's this about a Soviet boy caught in Los Angeles? How curious of the Soviets to let a boy wander out of Russia and end up in L.A. Didn't he know he was getting himself into? In fact, he was supposed to see Hollywood with his own eyes. How did they catch him anyway? You'd figure if he was clever enough to find his way to Southern California, he would be smart enough not to get caught. Maybe he walked into a liquor store and asked for a bottle of vodka with a side of caviar. Russians, they're just that's probably it.

The tragedy of this story is that he's probably going to be taking vacations back to Russia for a such a noble, a such a noble spirit should at least achieve the degree of being a Mickey Mouse, instead of just watch reruns of "The Wonderful World of Disney" back in Moscow.

I'm really quite upset about this whole thing. I may even write a letter. What's that you say? A Soviet part of the Olympics? Oh never, never, never.
Race, Ethnicity And Gender: Graduate Concerns

By Kofi Nyawuto

The origins of the Black Graduate Students' Association date back to 1963 when a group of graduate students formed a forum for the discussion of race and African students at UCSC. The group's main focus was fostering the systematic exclusion of Blacks, in particular, from academic and social problems. Since its inception, the organization has been involved in seminars discussing race-related issues, research methods, and design as these pertain to the work of the individual members of the organization. The Basic idea was to ensure that minority groups were included in the university system where they could have valuable preliminary feedback from peer and interested associates. The organization was formed to present such a scholarly piece was presented at the formally destined forum.

A more collaborative effort, an impressive number of workshops have been presented, as well as talks organized around issues of interest to the group membership.

As a natural outgrowth of our programmatic direction, the BGS has historically set about the creation and development of an educational base.

The major BGS project for the year is a conference entitled "Race, Ethnicity and Gender — the Academy and the Professoriate," to be held at UCSC May 25th to May 27th.

The agenda is broken into many components — the position and role of the Black/minority student and professional in the scheme of society; the position and role of the Black/minority student and professional in the scheme of the academy and the professoriate.

We are now interested in the past, present, and future of the Black studies program at UCSB, and the direction it is taking.

The position and role of the Black/minority student and professional in the scheme of society is an important issue for the entire UCSB community and its corresponding members in other institutions of higher education.

From such collaborative efforts, an impressive number of workshops has been presented, as well as talks organized around issues of interest to the group membership.

scheduled meeting of the 1983-84 academic year. Over two hours were spent debating committee appointments until council members finally decided to approve the appointments as a whole, singling out for discussion individual candidates held in question. Several council members were concerned some of the appointments were made for political reasons, rather than merit. Even after moving into an executive session, some appointments could not be approved, so council was forced to call a special meeting next Wednesday to give final approval.

"I'm really glad that we're taking the time to discuss the appointments," Internal Vice President and Council Chair Tom Thurlow said. "Last year, they (the appointments) were just railroaded through council without any discussion." In other business, a bill authored by Thurlow to allow council to maintain appointments, unanimous

Students committee highlighted the Legislative Council's final support for Ballot Measure A, and approval of a summer council imperative," External Vice President Jim Hickman said. "A summer council is our responsibility to make best representation of their interests in all levels of government."

"If the professionalism and dedication of the Lobby is extended to Washington D.C. ... students will have the best representation of their interests in all levels of government."

A bill authored by Hickman requesting council to endorse the U.C. Student Lobby's proposal for a one-year membership in the United States Student Association and urging the Student Body Presidency's Council to approve the proposal, passed unanimously.

"The USSA represents over 600 colleges and universities from roughly 30 states and has developed an effective advocacy program that works in conjunction with the National Student Education Fund to advance the rights of students in the nation's capital," the bill states.

"The U.C. Student Lobby is one of the best in Sacramento," Hickman said, "If the professionalism and dedication of the Lobby is extended to Washington, D.C. by joining the USSA, U.C. students will have the best representation of their
Local Politics

James C. Carey

Doctor Would Cut Arms Spending

By MAC LECKRONE

Nexus Reporter

Democratic congressio­
nal candidate for the 19th
District James C. Carey
said the most important
issue facing this district is the
possibility that "we continue to let regressive
ideas return to Congress."

Carey, a medical doctor,
said his first priority would be to make the presence of
to nuclear arms as safe as possible and to greatly
reduce military spending. Government military
spending only creates about one third as much
employment as most other
types, he said.

His second priority would be to decrease the federal
budget, emphasizing the
danger, particularly to students, in the increasing
national debt.

Carey believes a drastic
change is needed in Central
American politics. "We are
betraying American ideals
by helping one third of the
people in Central America
keep the remaining two
thirds in poverty, ignorance and disease."

The United States needs to
withdraw foreign aid en-
tirely from dictatorships
not providing social
justice. Nicaragua and
Costa Rica are the only two
dictatorships doing this, he
said.

Carey’s priorities, if elected, include aiding
the passage of the Equal
Rights Amendment, "real
environmental protection," and more
protection of rights for the elderly.

Health and housing aid
programs are in need of more state funding and
he will work to achieve this.

The revenues generated
for the Santa Barbara area
from the oil industry do not
outweigh the environ-
mental impacts, he said. "Leasing and drilling
have been proceeding at too rapid a pace" and the
state should have more say in this leasing, he said.

Carey supports new
legislation which would
force the federal govern-
ment to share offshore oil profits with the state.

Carey called the recent
loan defaulting by financial
aid recipients "a symptom
of moral decay," and added citizens need to put
trials to this country than they get out of it.

He opposes the Solomon
Amendment which would
require financial aid
recipients to register for
the draft.

Carey believes this
district is "one that’s
entirely balanced in social struc-
tures and feels a problem exists in a limited growth
potential due to the
geographical location of Santa Barbara. But, he added,"the area has
been drawn in a lot of economic
wealth."

The keys to winning the
election will be to register
new voters and to ensure
student voters are well
informed, Carey said.

Born in Joliet, Illinois, Carey lived in Santa Bar-
bara for 7 years. He at-
tended the University of
Northwestern Medical
School. He is president of
Direct Relief International
and the Mission Doctor’s
Association, and a member of Physicians for Social
Responsibility.

"In my job you have to
evaluate data of a technical
nature and make
judgements based on that
data. You need balance and
good judgment."

Facilities...

(Continued from front page)

The equipment will last
longer than 10 years, but 65
percent will be outdated in
four to 10 years, and 20
percent should be replaced
in zero to three years.

Horton pointed out that
"the numbers vary a lot
between engineering and
letters and science, but even
letters and science needs 15
percent of its inventory
budget every year (for
replacement and
renovation)." The more high
- tech, the higher the dollar
amount goes.

UCLA Chancellor Charles
Young recently testified
before the House Committee
on Science and Technology
in Washington, D.C., on behalf of the University of
California explaining,
"universities now face a
problem of major propor-
tions. Inadequate facilities
and outdated equipment are
a direct threat, across the
country to the quality of
instructional and research
programs. The economy of the
United States is increas-
ingly dependent on high
technology industry, and
universities will play an
important role in main-
taining the health of this
sector."

"The University of
California (systemwide) will

Wayne B. Norris
Campaign Stresses Peace

By MAC LECKRONE
News Reporter

"Management problems are a problem. We would diagnose and they are also the most difficult to per­suade the public to recognize." Democratic Congressional candidate for the 19th District Wayne B. Norris, said, likening the inefficacy our current a di nistration has demonstrated in attaining peace to a management problem.

"We need a Cabinet level peace department," Norris said, emphasizing working toward peace as his number one priority. Norris strongly supports the current proposal to build a peace academy. "The military is a source of pride for many people, but not for me," Norris said.

Norris believes there is an imbalance in our government because most politicians' background is in the legal field. "There is practically no one whose experience is technical and mine is. I think that I can bring a balance — I am an environmentalist."

If elected, Norris would be the first Congress member ever to hold a physics degree. This discipline is very important in today's technical world, he said.

Norris' other priorities include the passing of the Equal Rights Amendment and the cancellation of the MX missile and the B-1 bomber.

Credit Card Agency...

(Continued from front page) reached for comment on the charge.

After the charges were made public on May 7, Norris said, "The dates had been rescheduled for the arraignment. The number of students in this district is an asset, Norris said. "Students generally tend to be better informed." Norris would like to help students stay this way, adding he sees federal educational funds lacking, and would like to propose innovative federal educational programs.

"I think that the offshore oil industry, in the long run, and the nuclear power industry, in the short run, will both die due to a direct result of free market capitalism. Reversible energy will be cheaper," Norris said. He generally agrees with the pending legislation which would force the federal govern­ment to share oil profits with the state.

Norris calls the Solomon amendment, which require financial aid recipients to register for the draft, "poor management of the worst kind."

Norris was raised in Rutherford, New Jersey, and has resided in California for 19 years. He is a graduate of UCSB and has served on the Santa Barbara County Grand Jury for a year, has no formal experience as an elected official.

"I think I am different and have more to offer the swing voter," he said.

Athletes Relocate...

(Continued from front page) to an Olympic Village — It's something we knew for years would happen. It doesn't come as a big surprise," Barton said. The 306 extra rooms created by the Eastern Bloc pull-out will provide added office space for various teams and officials, Barton said. Barton called the way organizing has progressed since 1981 "a big guessing game." Ongoing construction problems with a cyclone fence surrounding the Santa Bar­bara Village, Barton said necessary con­tracts had not been properly worked out in advance.

The Santa Barbara Olympic Village has been progressing well, Barton said. The village (the area including Santa Rosa, Santa Cruz, and Anacapa dorms, University House, De Le Guerra Commons) has been enclosed and seven trailers have been set up for administrative and telecommunications functions, he said.

The majority of the village construction will take place after Spring quarter ends, when work will be done "day and night until it is finished," Barton said. For athletes' convenience, a 7-Eleven, disco-coffee bar, amphitheater, movie theater, post office, bank, and other stores will be set up within the village. The entire village, however, is only temporary and the only improvements which will remain in September will be those connected with the dorms, Barton said.

Wayne Norris

Norris believes the Santa Barbara area has growth problems. "Santa Bar­bara can't support rapid growth forever."

The number of students in this district is an asset, Norris said. "Students generally tend to be better informed." Norris would like to help students stay this way, adding he sees federal educational funds lacking, and would like to propose innovative federal educational programs.

"I think that the offshore oil industry, in the long run, and the nuclear power industry, in the short run, will both die due to a direct result of free market capitalism. Reversible energy will be cheaper," Norris said. He generally agrees with the pending legislation which would force the federal govern­ment to share oil profits with the state.

Norris calls the Solomon amendment, which require financial aid recipients to register for the draft, "poor management of the worst kind."

Norris was raised in Rutherford, New Jersey, and has resided in California for 19 years. He is a graduate of UCSB and has served on the Santa Barbara County Grand Jury for a year, has no formal experience as an elected official.

"I think I am different and have more to offer the swing voter," he said.

Credit Card Agency...

(Continued from front page) reached for comment on the charge.

After the charges were made public on May 7, Norris said, "The dates had been rescheduled for the arraignment. The number of students in this district is an asset, Norris said. "Students generally tend to be better informed." Norris would like to help students stay this way, adding he sees federal educational funds lacking, and would like to propose innovative federal educational programs.

"I think that the offshore oil industry, in the long run, and the nuclear power industry, in the short run, will both die due to a direct result of free market capitalism. Reversible energy will be cheaper," Norris said. He generally agrees with the pending legislation which would force the federal govern­ment to share oil profits with the state.

The IVCC is expecting Supervisor Bill Wallace to support the measure and hopes he will sway the key vote of Supervisor Toru Miyoshi of Santa Maria, whose decision "will hinge on whether or not he's sensitive to issues in this part of the county," Gault-Williams said.

The EIR will assess "primarily the finances of the proposed city and its finances past 1990. For the past six months or so we've been at odds with the Department of Environmental Review, because we feel that an EIR is not necessary, but they maintain that it is," because the availability of funds to maintain services will have an effect on the environment, Gault-Williams said.

The board set a precedent for funding incorporation EIRs with the recent allocation of $19,000 in response to Solvang's request, Gault-Williams said. Supervisor Robert Kallman, who is in support of Isla Vista's right to vote on the issue, is expected to support the funding.

The university administration is not in favor of incorporation due to their plans for future expansion, Conn explained.

Funds not allocated by the Board of Supervisors will have to be generated within the community, Conn said. On Wednesday, May 30, IVCC/IVMAC will sponsor a fundraiser to cover the costs necessary to pay for the EIR. The event will be held at Borsodi's Coffee House at 8:30 p.m. Contributions toward the EIR's funding will be gathered at the event.

Telescopes Available For Eclipse

The Physics Department at UCSB will set up telescopes outside of Broida Hall for safe viewing by the public of the partial solar eclipse to occur May 30. Astronomers from the department will be on hand to explain the phenomenon during the viewing time of 8:30 to 11:30 a.m. The event is free.

He warned that it is never safe to look at the sun without proper precautions, suggesting that one might pass a double-thickness of totally exposed and developed black and white negative film over a good filter.

There will be a gathering in the Centennial House at UCSB Thursday, marking the retirement of Henry Nawoj, assistant to the dean of the College of Engineering.

Nawoj came to the university in 1969 as a graduate student working on his Ph.D. in mechanical engineering. After graduating in 1975, he became a temporary lecturer. In 1978 he was hired by College of Engineering Dean John Meyers, mainly because he was not a professor, Meyers said. In the past the job had always been done by a faculty member, presenting a problem because the professor had to divide his time between his work in the class and his time as an assistant to the dean. Meyers explained: "I thought it could be done better by a staff person." Meyers said, "because he could work full time and wouldn't be concerned with such things as research."

Nawoj was also hired because he had spent 20 years in the U.S. Navy. Meyers concluded that with 20 years military experience "he (Nawoj) had heard every excuse and had also achieved a great degree of maturity."

Two of these characteristics are needed in this job because it encompasses matters relating to students such as admissions, reinstatement, dismissal, change of major, graduation requirements, academic advising, student cheating and freshman orientation, Meyers said.

While Nawoj held this position he was able to arrange the procedures surrounding admissions, graduation checks and various other administrative duties into an organized system, according to Roger Wood, associate dean for Academic Affairs for the College of Engineering. Wood has known Nawoj since he was a graduate student and remembers him as a patient, understanding person who has always given good advice to students whose interests lay in other directions and advised them to try majors outside engineering.'

Nawoj, after leaving the Navy, had originally contemplated going into private industry, but opted for a career in teaching and administration and "I have never regretted the choice," he said. "It was a rare opportunity and I'm glad I took it." However, he feels it is time for him to retire because "I wanted to get away from the pressures of this particular job and go to something else." After his retirement he plans to travel for a year and then become a visiting lecturer.

"His work has been very much appreciated by the dean and all the department chairs in the College of Engineering and by administrations throughout the campus in the College of Letters and Science and in the central campus administration," Meyers said. Nawoj has been married since 1949 and has one son.

Dutch, Italian and Romanian. Any romance language can be taken.

Gilbert is not only active in running and surfing but also "rides his bike every day from his home in Santa Barbara to UCSB," Nguyen said. Gilbert enjoys interacting with students and teaches an advanced physical chemistry lab. Nguyen said. Gilbert is "not only active in running and surfing but also "rides his bike every day from his home in Santa Barbara to UCSB," Nguyen said.

Gilbert has been translating professionally since 1947 in his spare time, and has translated nearly 500 highly technical papers for the Chemistry Department, he said. He translates from nearly 30 different languages but mostly from German, French, and Russian he said. He enjoys languages because he was raised learning both German from his parents and English. As a freshman and sophomore, Gilbert was responsible for the complete reorganization of the Chemistry 114 lab apparatus and instruments. He wasn't even intending on working in chemistry because I wanted to get my degree in field biology," he said.

Gilbert began working full time in the Chemistry Department and also taking a full load in biology while maintaining a high GPA, he said. The constant grind of work and studying every day began to take its toll, so he rechanneled his efforts into the Chemistry Department, he said.

"I wanted to get my degree in field biology, but it became too long of a process," Gilbert said. "It was an interme included comments on applications and gives feedback to them. She encourages students to read the Nexus as well as other campus publications and to attend events. She believes that being involved on campus is important for students to get to know each other and to build a sense of community.

The position of health science adviser was developed years ago, essentially evolving from the patient medicine adviser. "In essence, I created the position only because of the strong support from the faculty," Kohl said. Advising used to be a burden on all faculty, but now each advising their own students. "I enjoy it more than ever and had the desire to build the advising into something else," Kohl said.

According to Kohl, his role is also in guiding a student into medicine. As a freshman and sophomore, students are not required to declare a major. Kohl helps students make sure of their personal and professional goals. "Dr Kohl has helped so many young people develop the desire to build the advising into something else," Kohl said.

Once a student reaches the junior year, the student becomes more physical as Kohl helps them to decide where they want to apply to medical school.

Assistant Professor of Chemistry, Paul Humke, is being featured in this Nexus article. One of the many reasons that Kohl said he chose to leave academic advising was that he wanted to have more contact with the students. Kohl is a Visiting math lecturer at UCSB. "I retired from industry in 1971 and decided to settle in Santa Barbara not only for its beautiful, smog-free conditions, but also for its graduate school in Biology," he said. Hie Nexus thanks Dr Kohl for his time and cooperation.

The Nexus thanks Dr Kohl for his time and cooperation.

"I grew up speaking German and English," Gilbert said. "My brother and I spoke German to my mother and English to my father. I thought that it was perfectly natural to have one language for your father and another language for your mother. I have always loved languages. I took four years of Latin in high school and Greek in college. I spent a year in Europe in between and quickly caught onto French, Dutch, Italian and Romanian. Any romance language can be taken.

"We've Got the Best Coffee in Town, and Video Games TOO!"

"I would tell just as good students do just as well and have fun doing it," Kohl said.
Assistant-Director Supervises Dorms

By SHEILA GORMAN
Nexus Reporter

Assistant Director of Housing and Residential Living Sally Morgan, describes her jobs as "work with students and staff of resident assistants and advising throughout the year. I love the diversity of the work," she said. "Since the group of R.A.s changes every year, my job always seems new." Morgan is also responsible for recruiting a staff of resident assistants and advising them throughout the academic year. She represents the advantages of working here are so great, Morgan said. "Besides the climate and gorgeous campus, the students are well-motivated, high achievers and interesting in and of themselves. Most importantly, they are enthusiastic about living in the halls," Morgan said. This is different from schools that require certain groups like freshmen to live on campus, she explained.

Morgan supervises all programming in the dorms, including social and educational events. She represents the residence halls to the Olympic committees, and is involved with task forces that deal with sexual harassment, parking, damages, and discipline. Rob Donnerson, who is also an assistant director of housing, added. "She is realistic, but also has high ideals and is willing to push herself and others to reach a worthwhile end."

Health Coordinator Shows Dedication

by VALERIE DE LAPP
Nexus Reporter

"I am one of the most dedicated persons I've ever worked with," Peer Health Educator Mary Okihiro said of Peter Claydon, coordinator of the Alcohol and Drug Awareness Program at UCSB. "He's wholly dedicated and puts everything into what he's doing; he's very encouraging." Claydon's job involves many different responsibilities, including teaching undergraduate and graduate level sexuality classes on alcohol awareness; training students to become peer health educators; and developing alcohol awareness programs for the Greek system and residence halls.

He also privately counsels people who have substance abuse problems and makes presentations dealing with alcohol awareness to faculty, staff, athletic teams, residence halls, and numerous other groups. The program at UCSB is gaining national recognition and "is a model program for campuswide," Clayton said. He took over the program in 1982 as coordinator and since then it has expanded tremendously. "Our job is to help students to help themselves," Claydon said. "He helps this campus a lot with the problems that it has, he believes in the program," said his graduate assistant, Sue Kohls. When the news of his nomination reached him, Claydon was "very surprised and obviously pleased. Any recognition should spread among the staff, it's not just me that makes us successful," Claydon said. "UCSB has always done very well, but we are on the edge of a big change." Claydon said. He also has a strong belief in the program's potential. "I'm always focused on what we can do," Claydon said. He also has a strong belief in the program's potential. "I'm always focused on what we can do," Claydon said.

5 varieties of scrambled eggs

or create your own — all omelettes & scrambled eggs include: potatoes & toast or pancakes

---

One of the central provinces of mainland China, Hunan offers some of the most beautiful scenery in all Asia. The hardy people of this area have, during the centuries, developed a unique and somewhat spicy cuisine, created to both satisfy their appetites and warm them during the long, cold months.

We have deliberately chosen some of the most delectable and authentic specialties of Hunan province for your dining pleasure. All the dishes we serve have been carefully prepared by our famous culinary expert T.M. Lin and his specially trained team of chefs.

Recently in the Calle Real Shopping Center Hunan Yuan Restaurant opened and has already begun to establish a reputation based on good food and service, and prices that cater to the college community. They've introduced new dishes never before served in the S.B. area such as the Pupa Tray; varieties of delicious appetizers well-arranged on a tray with a flame in the center for a minor roasting at the table if so desired. Or try their Specialty in Edible Basket! Just imagine, well-prepared shrimps of delicious appetizers well-arranged in an edible basket and you can enjoy these together in your mouth. What an adventure! Don't miss it!

As well as these and other lunch and dinner specials, Hunan Yuan serves the authentic favorites of Chinese cuisine. Now you don't have to wait 'til you go home to go to that great Chinese place you know of...come to that great place we know of — Hunan Yuan Restaurant, when you get a craving for good Chinese food, or just something different.

Chemist Specializes in People...

(Continued from pg.12)

Students work closely with the doctors, in clinics, hospitals and in their offices. "The best time is not always working the daily routine, it is more rewarding for students to spend time talking to the physician over lunch," Kohl said. Kohl also encourages students to talk to the physicians' families to see how a doctor affects family life.

Students are asked to keep a diary throughout their internship so they can later refer to their experiences. "There was a lot of hesitation from the physicians at first about the program. However, it turns out that many of them have had an impact on the students from UCSB are real professionals," Kohl said.

Kohl also teaches Biology 130B, part two of a required series of genetics courses for biology majors. The course deals with general genetics and molecular approach. "It is the most interesting. "Students like him because he is very enthusiastic," Kohl said. As president of the western region of the National Association of Advisers in Health Professions and a member of the board of directors, Kohl is able to touch base with the students at universities as well as the medical schools and therefore allows the students to interact on a personal basis with these institutions. The more professional we are, the more the students respect Kohl said.

"The main purpose of the association is to become aware of change, demand and opposition of the medical profession," Kohl added.

Lecturer Communicates...

(Continued from pg.12)

"It's easier to get to know students in a small class," he emphasized, added that it is beneficial to get to know the students well because it is easier to address any problems that way.

When he is not teaching or helping students with individual problems, Humke is working with the five other visiting lecturers on real analysis. They are all mathematicians at Stanford University all over the world and are all research in the same general area of real analysis, Humke said.

During break they held a real analysis meeting which attracted a large international audience of mathematicians. The mathematicians came to aid and research in and find out what the program was all about, he said. Two weekly seminars and occasional college, special lectures on various topics related to real analysis, are also held by the visiting lecturers Humke enjoys the work because he likes working in a group "because there is a group of us, there is collaboration," he said. David Preiss, who works with the group of mathematics, said he was encouraged with Humke because he makes the work very interesting. "He is like him because he is very enthusiastic," Humke said. He is also a member of the Real Analysis Exchange, a journal of real analysis. "It is the most important journal of real analysis," Preiss said, adding Humke is an outstanding teacher, I think he deserved the nomination."

Intimacy Workshop Encourages Self-Confidence
Men and Women Discuss Fears Together

By EDWARD SAYER

Women and Men Talk Over Fears, Feelings
"Intimacy Dialogue," the third program in a workshop series sponsored by the UCSB Women's Center, addressed men and women's views on sexuality and intimacy.

"The main objective of this program was to give some pause on the back and a couple of years," said Mark McDermott, Ph.D., co-author Intimacy is for Everybody, a book written originally for sex educators to incorporate intimacy into sex education.

McDermott mentioned that according to Planned Parenthood for seven years and McDermott for three. Each has led lectures, discussions and workshops on sexuality and substance relationships, sexual feelings and more.

They have also taught strategies of how to talk to your children about sexuality and have helped many "sort out their values rather than give in," he said.

"Fear, insecurity, and low self-esteem prevent people from being what everyone Planned Parenthood wants to be: intimate," Barbara Petrich, a certified sex counselor and director of the program, said.

Petrich has been a co-author of Intimacy for Everybody since 1994. McDermott mentioned that in order to evoke in them an emotion of "being loved," McDermott said.

The second exercise served to "help men and women be comfortable with their desire to feel loved," McDermott mentioned. Everyone listed three specific things they needed to make them feel needed and then learned and practiced them.

The third and final exercise gave everyone in the room an opportunity to voice their most important desires. The majority of the responses overwhelmingly asked that men be more sensitive and understanding and that women be more assertive and share the responsibilities of maintaining the stability of a relationship.

Coordinator...

I consider myself a kazoos master.

Claydon's future will be independent thinking. Claydon's social activities are as follows: disc jockeying, surfing, and swimming. "I like the environment here," he said.

Maintenance...

All those interviewed agreed that UCSB's problems are severe. Jensen cited U.C. San Diego as also having "very modern facilities." An example offered by Jensen concerned the campus' underground cable systems which "are in terrible condition." They don't even dare go into some areas because it just disintegrates on them. (The campus all need to be registrated.)

For helping make the Sun-Day Extravaganza the HUGEST SUCCESS that it was I would like to personally thank the following people:

All of the students who attended the event and had a good time. And all of you who helped work in the Student Center Independent Student Union (ASU).

(Continued from pg. 3)

the issue, though he plans to support the funding of an environmental impact report to study the effects of incorporation at the supervisors meeting next Tuesday.

He would like to see "managed growth" in the area and is "totally opposed" to the current Goleta Water Board recall effort. "I'm appalled by the tactics being used," he said, adding he was approached by petitioners who claimed signing would help lower his rent. "More development will actually increase the rents, not lower them," he said.

After Wallace, the judicial candidates responded to questions from the Daily Nexus, with Judge Pat McMahon representing incumbent Judge Bill Gordon who could not attend.

When questioned on the effect of increasing politicization on the judicial race, the candidates differed in their replies. Municipal court candidate Richard Frishman expressed concern over mud-slinging tactics of some candidates. "Deregulatory remarks say more about the person making them than the person they are being made about," he said, adding voters must use discrimination when considering these remarks.

Heavy criticism against incumbents has been a source of controversy during the campaign. Incumbent candidate Judge Joseph Lodge said the issues are too complicated for the public to understand. It should be the media's responsibility, not the candidates', to investigate the records of others, he said, and suggested having judges run unopposed, allowing the public to vote yes or no.

However, opposing municipal court candidate Michael McGrath argued that serious issues should be exposed in an open election. Municipal court candidate Jim Kula agreed that accountability is necessary.

All candidates with the exception of Lodge were in favor of using attorneys as pro tempore judges to cut down on the backlog of cases. Lodge felt these temporary judges would be inconsistent.

Mussels and Clams
Quarantine Prohibits Consumption

By GREG CHOI
Nexus Reporter

The annual quarantine for all sport-harvested species of marine mussels is currently in effect, from May 1 to Oct. 31. Lynn Fultz, supervising environmental health officer for the County Environmental Health Care Services, said.

The quarantine is imposed each year because of paralytic shellfish poisoning caused by the dinoflagellate Gonyaulax catenella, a form of toxic luminescent phytoplankton. When leavves, such as mussels, clams, cockels and scallops feed on the phytoplankton, concentrations amass in their tissues making them poisonous for consumption, Fultz said. The phytoplankton produces an enzyme that destroys acetylcholine in the muscles of humans, thus preventing transfer of chemical messages in the muscles, Fultz said. Symptoms of PSP begin with tingling and numbness of the lips, tongue and fingertips, followed by disturbed balance, lack of muscular coordination, slurred speech and difficulty in swallowing. Fultz said. Severe poisoning can cause complete muscular paralysis and death from asphyxiation, she added. The quarantine prohibits the taking of mussels for consumption and includes a warning to remove and discard the dark parts of all clams and scallops before eating them, Fultz said. There is no way to tell on sight if the mussels have been contaminated, since most of the muscle is one color. In clams and scallops, however, the dinoflagellate collects in the digestive tract and can be seen concentrated as the dark spots of the bivalves, Fultz said.

There is no known antidote for PSP and the toxin is heat stable, meaning boiling or steaming the shellfish will not destroy the toxin enzyme, Fultz said. Samples of mussels are collected by the county Environmental Health Care Services, sent to state labs for analysis and toxicity testing. Fultz said. Eighty toxic micrograms per 100 hundred grams of shellfish meat is considered to be in the toxic range and is known as an "alert" level, the level at which warnings are then sent out, Fultz said. Toxic levels have ranged from 190 micrograms/100 grams meat in Chimney Rock near San Francisco to 4,000 micrograms/100 grams of meat in Cloverdale in Sonoma County. The quarantine does not affect commercially grown shellfish since it is tested to ensure its safety, Fultz said.

Red tides usually occur when offshore winds push seawater out, causing the ocean bottom to get stirred up. In warm water conditions, after the wind current has lessened, "plankton blooms" can occur. This condition is known as a "red tide" because the organisms are present in such abundance that the water color changes. Often the color is not red, but yellow or brown. Mussels, clams and other bivalves filter-feed on the plankton and can become poisoned. (Please turn to pg. 19, col. 1)
Equipment Maintenance...

(Continued from pg.16)
He agrees with the $5 million per year figure that Fultz has named, but notes that that would be enough to cover the most pressing needs only, without any new programs. UCSB alone needs several million dollars.

Fultz noted that sources are all the sciences are fervently attempting to tap in order to update their equipment. Chancellor Robert Huttonback cited cost-sharing as a present problem with utilizing government funding because the university is limited by its budget restrictions. The university presently has approximately $38 million dollars in contracts agreed with the government, Huttonback said.

To alleviate the problems presented by cost-sharing, "the National Academy of Engineers has recommended to the National Science Foundation that they put more emphasis on engineering. There are a number of bills in Congress that would allocate funds for financial support in this area," Mehrabian said.

A present program initiated by Mehrabian is to apply for NSF Centers of Excellence status in a number of areas. "We've already been successful" in some degree, he said. Private industry is a source that can be tapped without the need for cost sharing, and has been by Engineering. The Semiconductor Research Corporation is a company who has already begun to fund the College of Engineering to study and produce Microprocessors using Gallium arsenide, a compound that is faster than state of the art silicon chips. This is Mehrabian's first year as dean but in reviewing the history of the college, he believes that "Santa Barbara has been getting shortchanged system wide in fact allocation of resources. We think that the College of Engineering in the past has not fared well in the allocation of resources available to Santa Barbara. Of course, that is now changing with the new commitment of the chancellor and the vice chancellor (Sawyer) to engineering excellence on this campus. Jensen sees the problem with updating equipment as the speed with which advancements are made and old equipment is no longer in use in industry. Keeping up with advancement is important to the quality of education students receive at UCSB. However, he agrees with the $5 million per year figure suggested by Jensen, but notes that "we've already been successful" to some extent.

Lecturer Publishes Third Edition Of Hiking Book

By ROBIN MOTOOKA
Nexus Reporter

A desire to promote appreciation of the wilderness which prompted local high school teacher and UCSB Visiting Lecturer Ray Ford to institute a Environmental Studies department hiking class, has resulted in an expanded third edition of Ford's book, Day Hiking in the Santa Barbara foothills. Ford tells of his own personal experiences in hopes that the reader will gain knowledge by using his as a basis.

Ford began to explore the Santa Barbara foothills while teaching a Dos Pueblos high school outdoor education class in the foothills. "The basic thing I did was to take students out into the backhills in the back country of Santa Barbara, and that gave me an opportunity to spend time with the kids outdoors but specifically in the back country. Once I got familiar with it I started to get more interested in it and learn more about it. As I did that, I got interested a little bit in writing," he said.

In 1974 Ford wrote a book with one of his prior high school students on the San Rafael back country. In 1975 he wrote the first edition of Day Hikes, which was only 48 pages long. The second edition came out in 1979 and was 109 pages.

Professor Rod Nash formed the course, in which students hike in the Los Padres National Forest has been offered for two years through the environmental studies program.

"Environmental studies studies to me, whether you are looking at it on a scientific level or on a cultural interaction with the environment, is taking perceptions about how the tree fits into the entire system, and how man interacts with that system, he added.

Ford's interest in open spaces began when he was a small child. "I lived about an hour away from my grandparents' farm in Ohio and we always went up there, so I always had open space that we could go out into. It really wasn't until I began working in outdoor education programs that I began to focus on the wilderness aspects and the back country aspects."

After completing the first edition of Day Hikes Ford met a man named Dick Smith who has been referred to as the "conscience of the back country." Smith voiced concerns over the possibility of the backcountry becoming an overcrowded recreation area.

"Wilderness is a lot more than recreation. It is a system that functions under certain kinds of natural processes, and you can't identify that as a pure system because we interact with that in terms of a whole series of things," Ford said.

This interaction "is difficult to do if you have thousands and thousands of people tramping around."

"I do want to promote the idea of discovery in nature is far more important to people, if they discover it themselves, they said, "The idea of exploration and discovery is a real important thing."

Ford's book was displayed at the Santa Barbara Book Fair May 5 and 6. "I took place in the book fair, where it the book was introduced. The first impression on the public was very good. Everybody was oohing and aahing at it," Shaun Hooper, book publicist intern for McNally and Loftin Publishing Company said.
NCAA Track...

Complained from pg.21
May 12 that the UCSB record holder in the 110-meter high hurdles is the standard.
White's 13.85 clocking not only set a school record but also matched the NCAA meet, but Davis, also earned him a
place in the Olympic Trials. The trials will be far from
White's mind when he steps
The trials will be far from
White's mind when he steps

"It was a rough season yet
chance the Gauchos have
competition at the Cal Poly Classic, to be held November
24, although the Saturday opener is
next year." said head coach
Wilson is
Eugene will know anything
but this may be the best
this ful|-grain leather court
"I was concerned of making the
finals, but to do so he will
have to run faster than his
best thus far.
Few of his competitors in
Eugene will know anything
about White, and this may be
to his advantage. If he runs
the kind of race of which he
is capable, he could con-
clusively qualify for the
finals on June 2 and score
points for the Gauchos.
This is the second year in a
row that UCSB has sent both
a man and a woman athlete
to the NCAA championships,
but this may be the best chance the Gauchos have
ever had to score points for
both. The time to speculate
is over, it is all up to Davis
and White from here.

Lady Gauchos...

(Continued from pg.21)
set for the middle of the Thanksgiving weekend, Wilson is
hoping for good crowd support for the contest.

Softball Team Caps Season

By KRISTIN NICHOLSON
Nexus Sports Writer
After a slow start at the beginning of the season, the UCSB softball team got
track and won 12 games in their final month of action to
finish the season with a 17-41-
2 overall record.
"It was a rough season yet
the team learned a lot and
this ful|-grain leather court

Pam Rankin, one senior on the
team, considers her last
year career as a Gaucho
with a .300 overall batting average while batting .181
this season.
Rankin also played out-
standing defense, despite
undergoing knee surgery
midway through the season,
committing just four errors in
her last 31 games. Rankin
received the Golden Glove
award while being named
the Most Valuable Player of
the team.
"Pam was the center of this
team, and led the team well. We will miss her
a lot," commented Bonace.
Pitcher Sandy Orgiates
finished her first Gaucho
season with a 1.89 earned run
average and set a school record for most
pitched with 325 innings in 51
appearances.
Orgiates also finished with
a .384 batting average with
38 hits and six doubles.
Orgiates received a coaches
award from Bonace, along with Loni Witz and Monica
Richey.
"I'm glad Sandy decided
to come play for UCSB. She
has a strong season and
will be an asset to the
program in the coming
years," said Bonace.
Joann Saul led the team
with a .397 batting average,
17 runs, 90 hits, two triples,
and had 19 stolen bases. Saul
was awarded the Rookie of
the Year and Best Offensive
Player for the team.
Nancy Pinto ended a solid
season batting .370 with
50 hits and five RBI's. Pinto
was awarded Most In-
spirational and Most
Improved for the team.
"We will be back strong
next year," said Bonace.
"We grew and improved a lot
this year and want to that
come back and win some
games next year."

Said Barnes, "We have
lots of talent and we have
several freshmen that will
add to the depth of the team.
We will be a strong team
next year."
Women’s Basketball Coach Wilson Talks About Plans For Lady Gauchos

By MARY HOPPIN

UCSB News Sports Writer

Darla Wilson, women’s basketball coach at UC Santa Barbara, has signed seven freshmen players for the upcoming season. With only two seniors left, next season could bring the total to eight new faces in Gauchos uniform next year.

During the summer months, the coach will be looking for three junior college players to fill out the bench. “One of these players will be next year’s team in depth,” Wilson said. “Last year, everyone played out of position. This year, we recruited by position.” She described her picks as women with three qualities she looked for in all potential players: attitude, athletic ability, and academics.

Academics has played a key role in utilizing available funds. Players must demonstrate academic success if they are directed to the financial aid office. In order to make the six scholarships the Lady Gauchos can offer available to other players, “We’ve stretched our budget as far as possible to get as much talent as we can find,” Wilson said.

Wilson also stresses academics for the stability of the program. “If I recruit a very good athlete who can’t make it academically then she’s not serving herself or this institution,” she explained.

In hopes of establishing the next year's program with a more solid record than the 3-25 season last year, Wilson has sought out women with impressive high school accomplishments and good grades.

“All of the athletes we’ve signed are from competitive high school programs, kids who perceive themselves as winners, and that’s half the battle,” Wilson said. “They’ve been successful in high school and college. Athletes they have the love of being number one.”

Wilson is not looking for a Cinderella season to transpire in 84-85 because she does not want to put undo pressure on the young team, and also owing to the team’s inexperience. Her goal is for the new team to win their heart.

“This year’s squad, off a 500 season after a 2-5 season then I think it would be the greatest success story in Division III history.”

In singing out one of the seven, she chose Rebecca Rehder out of St. Joseph’s High School in Santa Maria. She averaged 15.0 points per game and 5.0 rebounds last year, and after driving her team on to the CIF 1-A title, she was named CIF 1’s player of the year.

“She has an excellent attitude towards the game and is a known determined lady on the court (and is defined by) the type of person we’ve been seeking for this program,” Wilson said.

The 6-1 Rehder compiled a 3.7 g.p.a. at St. Joseph’s and was a point guard for the Lady Gauchos. “She has an excellent attitude towards the game and is a known determined lady on the court (and is defined by) the type of person we’ve been seeking for this program,” Wilson said.

Ogle. Wilson feels that with the combination of old and new, the Lady Gauchos will be able to put together a solid program of talent and experience that will begin to earn the program a reputation for teamwork and potential as the team comes together.

UNLV will still be a difficult match-up but Wilson looks for wins against University of the Pacific and UCS. She hopes that fan support will increase with a winning season and she is optimistic about proposed double headers with the men’s team and plan for use of the Events Center for a one-year trial basis.

“It’s hard to put together a first rate program in a second rate facility,” she explained, in reference to the team’s present use of Rob Gym for its games. “The Events Center will be a first rate facility that will add to the competitive atmosphere necessary to improve the program. It’s an aesthetically good facility.

This year’s schedule will also influence team performance. “Last year, we played our games in clumps. We had five games in one week last year. Next season, the schedule is balanced,” Wilson said.
