Three-Year Ceiling
Maximum Reg Fee Raise Approved by U.C. Regents

BY MICHELLE TOGUT
Registration fee increases of a maximum of $151 over a three-year period were approved by the University of California Board of Regents at their meeting in Los Angeles Friday.

The new three-year registration fee ceiling will allow a maximum of $145 per quarter charge for the 1980-81 school year. Fee ceilings of $156 and $170 will be allowed over the following two years.

While the reg fee ceiling met with approval of the regents, it was not favored by student representatives. External Vice-President Jim Knox said students would have preferred that the regents approve only a one-year increase, with a revolving plan instituted to project possible fee increases for three years. "Generally, what this three-year thing is doing is allowing it (fee increase) not to be reviewed for three years," Knox commented.

He added that the reg fee increases would automatically be figured into the university budget each year.

"We don't care if they (the regents) plan for the future," Knox said. "But we want them to take it up each year and discuss it. We want the ceiling to be approved for one year." With the three year plan, the regents will not be forced to re-approve reg fee increases until the 1984-85 school year. U.C. presidents will submit proposed reg fee increases to U.C. President David Saxon "as a part of the capital budget to be approved by the president and reflected in the regents' budget." Knox said that many students were dissatisfied with the plan because there would be no scrutiny over the increases. He felt the regents would not be looking into it for (Please turn to p.12, col.1)

Faculty Study Says
Teacher Time Drops

BY LEE SHELTON
University of California faculty members spent less time with their students last year than in the previous year according to a report issued recently by the Institute for Research in Social Behavior.

Commissioned by the university administration in conjunction with the statewide Academic Senate, the study showed that while the hours per week devoted to research activities increased from 22.9 to 23.2, the time spent in direct contact with students went from 11.0 in the 1977-78 academic year to 11.3 in 1978-79.

These findings were based on time records submitted by 1,340 faculty members from all nine U.C. campuses. Those chosen to participate in the study were sent questionnaires that asked to detail their activities over a twelve-month period. Methods employed by the institute in doing its study were criticized by several UCSB faculty members. Associate Professor of History Harold Drake said of the study's results, "It's a negligible figure and with all the variables that come into play, I feel that I can predict an increase for next year and have as good a chance of being right as predicting a decrease.

While this particular study offers no evidence of a trend toward increased research emphasis at the expense of students, it does raise questions of whether or not research is already overemphasized and, if so, are students being deprived because of it.

Most faculty members questioned regarding this see no inherent conflict. The dominant faculty of thought seems to be that these two aspects of the university are quite compatible and that good teaching is most often the product of good research. "This is primarily a research institution. Faculty members are paid for one third of their work being researched," said Drake. (Please turn to p.13, col.1)

Sierra Club
Opposes LNG
Terminal Site

Opposing the construction of an LNG terminal at PT. Concepcion, the Sierra Club Monday asked the California Public Utilities Commission to reopen its hearings on whether the site is an appropriate location for an LNG terminal.

According to Mike Dall of the Sierra Club, the main reason for the petition was it being a response to the United States Geological Survey Report that indicated PT. Concepcion was earthquake-prone. The USG report describes the land where the LNG construction has begun and where many small earthquake faults run through or close to the proposed LNG terminal site. The survey faults run through the PT. Concepcion-Gaviota area, and its northern boundary. The exposed bedrock are located on top of shallow, landslide-prone reverse faults that are deforming the (Please turn to p.12, col.1)
ORO GRANDE — Two fires at the Riverside Cement Co. plant in Oro Grande caused an estimated $400,000 in damage, according to fire officials. There were no injuries. One fire started when a hot plate in the company lunchroom short-circuited. It was extinguished quickly by employees. The second fire, which caused extensive damage to the lunchroom and sophisticated testing equipment in an adjoining maintenance building, broke out in the lunchroom two hours later and took four fire companies 45 minutes to extinguish. It was apparently triggered by electrical wires damaged by the previous blaze. The Department of Forestry is investigating.

GLENDALE — A 55-year-old Caltrans worker was electrocuted while working on a light standard on the Ventura Freeway in Glendale. Samuel Ho of San Gabriel was working at the base of the light standard when he touched a wire that a co-worker had already tested and was thought to be dead. Ho was electrocuted and the co-worker was so badly shaken by witnessing the accident that he had to be hospitalized. A defective photocell electric may have caused the incident, authorities speculated.

SAN JOSE — A San Jose city councilman and a former city council candidate were indicted by the Santa Clara county Grand Jury in a widening city government bribery scandal. Indicted on bribery charges were City Councilman Alfredo Garza and Sue Hughes, a real estate saleswoman and Garza supporter. The charges were reportedly based on testimony by developer Anthony J. Franco, who pleaded guilty to bribing Garza and conspiring with other city officials. Prosecutors testified he paid more than $30,000 to four council members, the city’s public works director and his deputy.

SAN FRANCISCO — Folk singer Joan Baez, city officials and the San Francisco Examiner launched a $1 million fund-raising campaign for aid to starving Cambodians. The effort was kicked off with a meeting at San Francisco’s City Hall by Baez, publisher Reg Murphy and Mayor Diane Feinstein. The money will be channeled through the Humanitas International Rescue Team.

HAWAII — The mountains of rubbish throughout Hawaii continue to grow as the strike by public blue-collar workers enters its fifth week. A federal mediator, after meeting with the striking United Public Workers and state and county representatives in a late-night session, scheduled a new bargaining session for Monday. Average pay of the affected workers is $880 a month and their latest reported demand was for a total $250 monthly pay hike over a two-year period.

KANSAS CITY — A white former University of Kansas Medical School physician was awarded $44,000 in damages in a libel suit against four of his black students who had charged him with discrimination. The Kansas City jury made the award of compensatory and punitive damages to Dr. Dante G. Scarpelli from each of the four defendants, all now graduated. The students had filed a five-page complaint in 1974 charging Scarpelli with “willful and unlawful discrimination.” The complaint was dismissed by a faculty panel.

COLORADO — A Colorado foundation has offered to remove a fur, which it feels Alaska plans to kill in an aerial hunt this winter, at no cost to the state. The Wolf Country Foundation of Boulder said it is opposed to live-trap wolf hunting and wolves the state plans to eliminate in interior Alaska and transport them to the foundation’s sanctuary in Colorado. The foundation would like to reintroduce the wolves into the wild and maintain a gene pool for a breeding program for pure-blood wolves. Alaska game officials want to reduce the wolf population by 60 percent in order to increase dwindling moose populations.

WASHINGTON, D.C. — Concerned about women’s intake of caffeine during pregnancy, a consumer group urged the Food and Drug Administration again to require warning labels on coffee and tea. The Center for Science in the Public Interest also said it has sent letters to 12,500 doctors and 1,500 midwives urging them to advise pregnant women not to consume caffeine. Michael Jacobson, director of the group, said tests have linked caffeine to such birth defects as missing fingers or toes, and possibly to reproductive problems.

SOVIET UNION — The Soviet Communist Party newspaper Pravda proposed a “program for strengthening peace in Europe,” criticizing the North Atlantic Treaty Organization to deploy new medium-range nuclear missiles in Western Europe and the Soviet plan for a deployment in central Europe, and renunciation of various military maneuvers.

MISSISSAUGA, CANADA — Exhausted firefighters hauled in miles of fire hose and cleanup crews worked to clear away charred railway cars in Mississauga, near the city of Ontario, Canada. Chemical experts were examining the last few thousand gallons of chlorine from the railway tanker car that ruptured when a freight train derailed last Saturday, causing a blizzard of smoke and fire. The last of nearly a quarter of a million residents returned to their homes after being evacuated Monday. Fire officials feared a release of a cloud of deadly chlorine gas.

ROMANIA — Thick, oily smoke continued to pour from the burning hulk of a Romanian tanker in Istanbul harbor, covering the Turkish city of five million people with a blanket of toxic fumes. The tanker Independent caught fire after a collision Thursday with a Greek freighter. Turkish pollution experts warned Istanbul residents to keep their windows closed. A huge oil slick so far had not reached shore, but officials feared an environmental disaster.

POLLAND — Edward Gierek, Polish Communist Party leader, said that severe shortages of apartments would not be solved for at least five years and that the nation’s shortage of meat would also not be remedied soon. He spoke to shipyard workers in the seaport of Szczecin in an address that was broadcast nationwide.
SUNRAE Works to Promote Solar Power As Alternative to Standard Energy Sources

By KENNA HINES
Prepared especially for officers to current energy and resource grabbing groups such as Solar Use Now for Resources and Employment major concern in their role as California's only full-time solar lobbying organization.

In the past year, the non-profit organization, based in the Goleta Valley, has been working towards passing solar legislation on both the local and state level.

After the defeat of Proposition 15, SUNRAE worked to present arguments for the advantage of solar power for jobs and energy. The group gathered data on union and business community, and also worked with the elected officials who decided the energy fate of California.

Presidents of all three SUNRAE offices in Sacramento, San Francisco, San Jose, San Diego and Goleta. Ed Maschke, SUNRAE's executive director, originally organized the citizens' advocacy group.

Later, the group moved to a trailer at UCSB, and a year ago, SUNRAE moved its headquarters to its present location at the Goleta Community Center, 886 Hollister Avenue. Maschke is also involved with the Santa Barbara City Council and the National Solar Lobby in Washington D.C.

Within the last three years, SUNRAE, with the support from lobbyist Alan Mirvis, has written over 150 letters to local officials, has contacted 1,000 newspaper editors, and has written over 500 editorials. The largest single solar incentive in the country was the passage of the 50 percent solar tax credit.

Our lobbyist is a watchdog on the Public Utilities Commission and oil companies. We make sure small businesses have a fair chance in solar energy," said Ed Johnson, SUNRAE's educational coordinator.

In January, representatives from SUNRAE will lobby in Sacramento. "We want to persuade elected officials to vote pro-solar energy by showing them SUNRAE's facts and figures. With a large membership and workers, unions and organizations backing us up, there will be a tendency for legislators to vote for our bills because our members and others will vote them back into office again if they help us," said Johnson.

"Presently, we are working on SB 507, carried by State Senator Omer Haines, which would extend an existing 30,000自家 solar power incentive to include full-scale, low and moderate income applications of solar energy. It is also related to solarizing swimming pools.

Locally, members are involved in solar educational outreach programs, renewable energy displays, recycling operations, "Hands-On" solar construction workshops and the publication of their quarterly newsletter "Hands-On." It contains information on the latest trends in solar and alternative forms of energy.

In May, SUNRAE celebrated "Sun-Day" on the Capitol lawn in Sacramento by displaying solar energy resources, such as solar road-box collectors. SUNRAE also ran an energy display at the Gounte Fair at the Ventura County Fairgrounds in October.

Currently, SUNRAE runs the I.V. Recycling Center which sorts curbside pickups of cardboard, newspaper, glass, plastic, stationery and oil. We look for people who want to start recycling and help us with this job on the first and third Sundays of every month," said Johnson.

"I would like to see solar energy implemented as soon as possible. We also like to help make SUNRAE the most effective grassroots solar organization in the country," added Johnson.

SUNRAE is assisted by the UCSB-based club called "Friends of SUNRAE." The 15 members of the non-profit organization favor solar energy alternatives that are safe and reliable.

Johnson acts as a liaison between the two organizations at Friends of SUNRAE's Thursday meetings at 5 p.m. in the U.C. student centers.

The two letter series are the main topics of discussion at the Friends of SUNRAE's meetings, and solar films are often shown. "The first series will be lectures on the mechanics and operations of solar energy by people who are doing this work," said Doug Rowe, a member of the Friends of SUNRAE.

(For more up to date information on solar energy please turn to page 16, Vol. 1.)
Inflation Costs

A new three-year ceiling on registration fees was passed on Friday by the U.C. Board of Regents. The plan sets a maximum fee increase of $417 over the next three years.

Under the price ceiling, the issue of reg fee increases will not have to come before the regents for another three years. Instead, each chancellor will send his recommendation for fee increases to U.C. President David Saxon for approval.

While we recognize the serious problem of inflation causing increased costs for reg fee funded programs, we disagree with the solution approved by the regents.

Reg fee increases are justifiable but we feel the regents should examine the problem each year instead of setting a ceiling for the next three years. By doing this, they leave open the possibility that reg fee increases will not be scrutinized and will escape examination by the public.

It would be preferable if the regents planned for the upcoming three years but had to justify increases each year.

We would also like to see the requests the students made at the regents' meeting be met: the design of both examination for the next three years.

There are twelve presidential candidates. Carter, Kennedy and Brown for the dempublicans, Reagan, Bush, Baker, Dole, Ford, Perot, Presler and Stassen for the Republicans. The year of the election is over a month away. The election itself is just less than a year away. The whole of the year 1980 may well be wasted, externally as well as in- ternally, on the chasm of our quadrennial revolution.

At the regents meeting be met: the design of both examination for the next three years. Foreign policy will be defined in a number of percentages, in by people with names like Gallup, Yankovitch and Caddel. Old friends will have short words. Lovers will have spats. It will be parent against child and child against parent. And not a moment too soon, I say.

On the dempublicans side I'm backing Brown by default. Carter is about as inspiring as a bread sandwich. Granted that he usually tries to do the right thing, that's the nicest thing I can say about him. Kennedy has charisma. Charisma is the disease that killed Mussolini. It certainly hasn't done Teddy that much good. Mussolini had charisma. So I'm stuck with Jerry for the long shot. The way I see it Carter and Kennedy will best each other to death and Brown will emerge as the compromise candidate. The strategy has been tried before and as far as I know it's never worked yet. It's perfect for Jerry.

On the regent side the eyes of Texans are upon me. I like Kennedy best, but Bush in close second. None of the others strike me as particularly sane. I like Kennedy because he does funny things like use official U.S. policy as his campaign stand.

Mr. Yager also stated "whether or not a site specific project will be approved by the Coastal Act is a matter for public speculation." On Aug. 3, a 190-page detailed development plan, in- cluding an environmental impact report, was submitted to the planning commission and the supervisors. Mr. Yager has yet to even see this document.

The purpose of the Coastal Act is to "protect, preserve and enhance our coastal resources." The purpose of the Local Coastal Plan is to implement the state act. The LCP is designed to maximize public input into the planning of land use in the coastal zone. It is most certainly within the power of the Board of Supervisors to use the LCP to "protect and preserve" More Mesa as a unique and valuable coastal open space.

That's what this community needs. Maybe we should be spending our time and money on playing games with our future.

Editor, Daily Nexus:

Today at 3:00 in Campbell Hall the escalating nuclear arms race will be the topic of a speech by Si dney Lens, a longtime member of the peace movement.

Lens has written a number of books on the topic of the arms race and its implications for the nation, to attend the Lens for the most fun to fight on the nuclear power issue. It would be Johnson all over again! Bush seems to be an adult conversation.

Connelly you know, that's what I'd like to see. They could have weekly T.V. debates for about a month, it would be one hell of a show.

Our country is obviously overdue on paying its dues. There are so many serious problems begging attention it beggars the mind. There's the question of our debased currency. Money is a store of value and is limited. If you have too much money and not enough value you get less value per unit money. It's that simple. There are all the difficulties we've created with our out-of-control behavior in the world community. Are we building an empire or aren't we? We'll like the high horse until people start vomiting garbage at us. Now we're acting like we want to disjoint and can't decide how to do it. After all there's the fact that we're still fiddling our nest and the resistance to change is very strong. We could spend a large chunk of time just staying home and picking up the trash, from L.A. air to nuclear wastes to Lake Erie. The list could go on and on. We're ripe for a protracted serious public debate. It's my hope that this campaign to provide us with a timely airing of our dirty laundry. With this many voices raised in contention the odds are much better that at least one of them will speak sense.

What I'd really like is for everyone involved to shut-up and go home and think for about two months and come out dealing real seriously, because so far I've never voted for a presidential candidate who didn't strike me as the lesser of two evils. I don't like it that way. I'm convinced that there is an outside chance that this next election may be different.

In the two years since that last presidential race there has been little sign that the American people will be able to come to the polls with a clear choice in November 1980.

Today, all lovers of peace are celebrating the second anniversary of Anwar Sadat's historic visit to Jerusalem, the capital of Israel. On this day two years ago Sadat declared war on Israel that there would be no more war. The same Arab nation that led the Arabs, to war, is now leading the Arab people to peace. It's true that this war is now, they are "waging peace."

In response to Craig Zeron's review of the Oregon coast, in which he attempted to compare the music to the lifestyle of Marin County, we would like to inform him (and we hope it won't be a disappointment), that unlike the "unstructured" and "self-indulgent" Oregon coast, Marin happens to be a well organized, culturally balanced and environmentally aware community.

It is most unfortunate that he has only packed up the "beach" and "granita" aspects of Marín. Perhaps if he were to have a more serious look he would find a bit of elves, productivity and citizenship that along with his stereotyped "higher consciousness" individuals.

Cynthia Lima, Cynthia de le Creux
Chicano Culture Shunned

An open letter to the UCSB Department of Anthropology:

This year, more than ever, El Congreso at UCSB is facing a situation with the Department of Anthropology which demands total exposure to the community and action from El Congreso and the administration, and all concerned parties. For four years, El Congreso has tried for cooperation from the Department of Anthropology on the same level as the cooperation with other campus departments in Spanish, Psychology, Education, Religious Studies and the Chicano Studies Department. During this time Anthropology has evaded their responsibility in offering courses on Chicano culture and the community and is hiring a professor to teach these courses needed by students who will work with the community after leaving the university.

The Anthropology Department has insisted on research and publishing standards which are completely against Affirmative Action and the reality of Chicano professors facing historical obstructions. If Anthropology's standards were used by other campus departments, UCSB would not even have Chicano faculty in any of its departments. Anthropology's standards are unfair and do not give proper recognition to Chicano Studies research and Chicano publications. The number one Chicano candidate for consideration for appointment in the Anthropology Department, Chicano Studies is an excellent example. The professor in question has outstanding research, teaching experience, program experience and community service. No better Chicano faculty member has been hired at UCSB as Assistant Professor. Nevertheless, Anthropology refuses to make a commitment to hiring this professor who would greatly benefit the community.

It is important for university students as future professionals who will be working with Chicanos to understand the culture by taking Chicano anthropology courses. For 14 years, the number of Chicano students has been increasing at UCSB. There is still not one Chicano anthropology course offered. This negligent situation must not be allowed to be perpetuated with one of the biggest departments on campus. If change does not come from within, it is the time and the responsibility of others to act.

False Duplication Claims: Anthropology is incorrectly claiming that Chicano culture courses are not needed because of the graduate seminar on Mexican Culture that is offered. However, the Anthropology professor teaching this course does not believe that his course would be duplicated by the addition of Chicano courses on culture. He has told El Congreso on several occasions, that his area of specialization is not Chicano culture. Yet, the Anthropology Department, as they did three years ago with previous Chicano applicants, is claiming that the program being considered at this time is a duplication of courses already offered. These false claims are violations of Affirmative Action which must not be allowed to go on.

El Congreso, the Chicano/Mexican student organization is committed to democratizing the university by having Chicano/Mexican representation on all levels and in all departments. Through struggle and cooperation progress has been made, but the struggle is not over. Students and the community must realize that the under-representation of Chicano/Mexicanos is still reality. El Congreso is committed to changing that reality.

Elena Rodriguez
El Congreso

Details That Were Ignored

Chicano plutonium plant was guilty of negligence because Miss Silkwood was contaminated. The judge also barred testimony, that his area of specialization is not Chicano culture. Yet, the Anthropology Department, as they did three years ago with previous Chicano applicants, is claiming that the program being considered at this time is a duplication of courses already offered. These false claims are violations of Affirmative Action which must not be allowed to go on.

Editor, Daily Nexus: I attended last Monday's presentation regarding the controversy surrounding the death of Karen Silkwood. I found the presentation to be thorough and many important details regarding the case which were not brought up by the UCSB students body.

The courts did not find that Karen Silkwood was murdered. In fact, an FBI investigation revealed no murder. Moreover, the Oklahoma State Police found that Miss Silkwood was highly tranquilized at the time of her auto accident; her blood contained methadone, and testimony of her friends indicated that she should not have been on the road. In the Silkwood case a federal jury in Oklahoma City decided in May that the Kerr-McGee Corporation's

Cameron plutonium plant was guilty of negligence because Miss Silkwood was contaminated. The judge also barred testimony, that his area of specialization is not Chicano culture. Yet, the Anthropology Department, as they did three years ago with previous Chicano applicants, is claiming that the program being considered at this time is a duplication of courses already offered. These false claims are violations of Affirmative Action which must not be allowed to go on.

Editor, Daily Nexus: Of please, and bad Nexus staff, could we please have a section devoted to women and minorities? And could we have a section for the virgins on campus? And left- handers and pacifists? Also, why do you need a section for surfers who are not blond, a section for surfers who do not surf, a section for surfers who do not surf, and a special supplement for chicano professors who are not Chicano professors? It would be real unfair of you not to do this, you big bad Nexus staff.

Oh please, big bad Nexus staff, *
Dance Review
Trockadero Triumph At Campbell Hall

By KUMUPTA HIFLAPKA

Lee Ballets Trockadero de Monte Carlo is a garden of prima ballerinas, Hee, splashy and regality.

Diaghilev's Ballet Russse boasted of Pavlova, Karsavina, Danilova, Nijinska, Markova. Trockadero's new issue is no less fantastic — Zamarnya Zamartova, Tatiana Yobketyooldskaya, Marguerite Mundy, Ida Neversyayeva.

Seldom is a reviewer presented with such a plethora, such a full feast to sample and compare. Zamarnva — Dought past her prime and showing an occasional naivete about the face — retains the spirituality that elevated her frail 85 cm. frame beyond mere human limitation into the eternal. Her range was adequately demonstrated as she navigated with ease between anisotropic stark angular Picasso-esque Go For Barcos, to the ingenuous roll of Eliss, to the Arsen von Pollo, — flavored Don Quicote.

I must admit disappointment that casting did not allow us to see Neversyayeva as Carletta Grisi in Pas de Quatre, for surely she shares the same "strength, lightness, suppleness" that Lauter attributed to Grisi. Each of her poses, each one of her movements, is stamped with the seal of originality.

In the Valse, Op. 70, No. 1 from Les Sphéres Neversyayeva is not at her best, perhaps the bourgeois nature of the piece does not well suit the only Socialist Real Ballerina of the Working Peoples Everywhere now working in the West.

But in Le Corsaire she excels. Her crisp allegro is certainly the standard by which others must be judged. But communications is her forte. The subtle, impervious open-hearted communication with the audience that allows us to share in her virtuosity.

I have however, the best for last. There are a handful of ballerinas that come to mind when one considers ballet excellence — Frola Makarova, Farrell, Alexs, Gregory. I've always wondered if, off somewhere far from view, unknown to the world at large, might exist another claimant to this elite order.

I need wonder no longer. No one knows what path led Tamara Boundyewa from the Siberian capitals of her early career, along the Ballet Underground (IRT) to a God-given home at the Trock. Little is known of her background; a rumored birth in Brooklyn, the transient childhood of an orphaned with the Trans Siberian Ballet Lorry. But the past is insignificant.

The true artist is inseparable from her art. We can isolate some particulars. Her hummingbird's breath piques, in which she does not touch ground, but hovers over it, dauntlessly on her existence. The perfectly controlled freedom of her port de bras, romantically expressive, yet restrained, understated, elegant. Her regal bearing; her endlessly deferring reverence.

But ultimately that artistic essence that sets her apart, that force that demands our attention and reverent falters, never fails to please, is Boundyewa is both actress and eye, push-pull a la Hoffman. But gutty ugly, Hypernatural.

Like Provisor's globs, Dorothy Reid's boat-skeleton cloth, wood and chain sculpture (formerly 1979) is not pretty. What it is, I don't know. But if you stand at one end and give it a shove, it's engaging. Mostly because you've engaged it.

Paul Kos' piece is a totalitarian act in itself. It patterns behavior. The opening night crowd marched to Kos' beat to the 9th percentile. By limiting our options and leading us to the safe decision it influences our nature.

Evolution: Notes for the Invasion — one more march into a particulate neutron vehicle.

Jim Peper's constructed stereoscopic photos are an uneventful treat on flannel. Superimposing 3d geometry over postcard images, he plays out visual puns. It's fun to watch people try to focus with the 3d glasses.

I wonder if Ellen Brooks specified the hanging order of her series of photos. Each color print is of 1/12 scale miniatures, x-ray images of people, furniture, household objects, a doll head world. But while the final five photos all have a relentless domesticity, the preceding three images look like, or cheery dog, or cheery dog, Disturbing. The thing about the order is this: after the surrealistic ruins, the normality of the remaining images is threatening.

Y. Y. is about as flat as you can get. While those dancing dots radiate out at us, ghosting and blurring, they form a deadless plane.

Howard Fried's video Vivo's Reef entertains while it grates at significance. In arbitrary (but art context) gaming situations — i.e. there are some structural rules — the artist exposes the awkward interaction of individuals. Laughter and tension.

This is a theatrical work. Fried utilizes television technology as alienation devices. The viewer is asked to distance us from his ideas enough to freely see what he says. Though he's speaking with a lecture, we are not being lectured to; we are shown a lecture.

Vivo's Reef: the rest of the avant gard - I guess he names it for Vivo Arconico. Fried is mapping an ecological territory. Fried explores transmission of information from the avant to the masses.

Art Review
Unorthodox Art at University Museum

By JEAN MATTOCK

I left a contact lens and can only see one of my eyes. No depth perception. It's got me thinking about flattening.

Janis Provost's globed oil and acrylic impastos (at the University Art Museum group show: Bay Area/Contemporary Strengths) are not flat. Besides the optical illusion — cogulating growths budding out from the surface — her gaudy cake-frosting color punchards and impels the mind to imagine a world of multi-faceted geometries over postcard images, he plays out visual puns. It's fun to watch people try to focus with the 3d glasses.

**Blonde Art to the Beat**

*Chrysalis*

By KEVIN MACKINNON

It takes a moment or two to put your finger on just what exactly it is that's different about the new Blonde album, *Art to the Beat*. That "Blondie" sound is there; the upbeat, melodic pop songs, the shrill, insistent lead singer, Deborah Harry's baritone. But then you realize that what's tragically missing is the stratospheric energy, the vitality which made the original Blondie, a new wave classic. As a friend so aptly put it, the new album might as well be called "Blondie" for all the excitement it offers.

Blonde's first album, released in 1977, was a catchy, witty amalgamation of those pop styles which characterized the music of the 60's. One of the most innovative albums of the year, Blondie's overall spirit more than compensated for the somewhat rough instrumentation.

In contrast, on the new album, producer Mike Chapman has opted for technical perfection at the sake of any life or spirit. The Blondie sound is there alright (on at least most of the tracks), but that sound now has all the animation of a stuffed and mounted carrier pigeon, under glass and gathering dust in some museum.

In a sense, this taxidermy is just what Chapman has done with Blondie. *Art to the Beat* is too polished, too calculating in its efforts to duplicate the success of last year's *Parallel Lines*. As a result, the new album is quite like that carrier pigeon: identical to the original at first glance, but you can tell the only way it's going to stop is by being threw it out the window, a not inappropriate idea in this case.

Trockadero has solved this problem by designing the show to a suddenly hushed opening night. There is no song that immediately grabs and then holds one's attention, through the "Live in the Real World," comes closest, thanks to Harry's inspired sensitivity, obviously a labor of love. Yet this play is more than just entertainment; it is a labor of love. Yet this play is both slick to stay with you and too inappropriately long.

Despite the overall monotony of the album, it is ironic that what ultimately prevents its success is that band the overreachs itself stylistically. Too much ground is covered, and furthermore, all of it has been weakened by Chapman's white-wash treatment. The band simply spreads itself too thin.

"I can't believe it and I can't do what I call supposing." He hypothesizes that what's tragically missing is the stratospheric energy, the vitality which made the original Blondie, a new wave classic. As a friend so aptly put it, the new album might as well be called "Blondie" for all the excitement it offers.

One last word. Recent events with ABT may become a fat kid punch out art history. It has all the garnish of a martial arts game of cat and squirrel in this case. Much of this sense of ennui comes directly from the material. There is no song that immediately grabs and then holds one's attention, through the "Live in the Real World," comes closest, thanks to Harry's inspired sensitivity, obviously a labor of love. Yet this play is more than just entertainment; it is a labor of love. Yet this play is both slick to stay with you and too inappropriately long.

**Arts & Lectures to Present 'Sizwe Bansi'**

A week from tomorrow, on Tuesday, November 27 at 8 p.m., Athol Fugard's powerful drama "Sizwe Bansi is Dead" will be performed at Campbell Hall by members of the Southern California Black Repertory Theatre. Directed by Luther James, "Sizwe Bansi" tells the story of one black man's fight for survival against the South African apartheid system.

Sizwe Bansi (portrayed by James Avery) is an illiterate country worker who has come to the city in search of a job to support his family, who he left behind in one of the bastuarunds, or homesteads set aside by the South African government for African inhabitation. However, Sizwe lacks the necessary documents for him to remain in the city, a "white area" in which the movement of blacks is tightly restricted. He then meets Stylist John Wesley Hunter, a man with a feasible solution, but one whose price is the death of Sizwe.

The present production of "Sizwe Bansi" has been ill- praised by Welton Jones of the San Diego Union: "John Wesley Hunter, Jr. and James Avery...play the three roles in the play with superior discipline and inspired sensitivity, obviously a labor of love." Yet this play is more than just entertainment; it is a reminder to us that the concept of freedom for all men is still not in universal practice.

**Memo to All Those Interested in Film**

Film students of UCSB are currently in the process of reviving Focus magazine, a publication devoted to the many aspects of cinema. The magazine has been dormant for the past year or so because its previous staff, upon graduation, decided to take it out into the commercial world under a new name: World. The goes are back in motion and the editorial staff would now like to extend an invitation to all those interested in writing about cinema to come to this meeting. This may be your big opportunity to express your writing talents about cinema. So sharpen your pencils and come prepared to write—we look forward to seeing you on Tuesday.

Analysis of Arms Race

Lens Speaks on Doomsday Strategy

Noted author, Sidney Lens will give a lecture on "The Doomsday Strategy: an analysis of the escalating arms race," at 4 p.m. in Campbell Hall.

Previous to this, a wide-scale teach-in that organizes lectures for over 100 people will take place. This lecture is being sponsored by A.S. Lectures, the Sociology Department and the Weapons Lab Conversion Project.

Working party of the research taking place at the Livermore and Los Alamos laboratories has released the WLCP, the local chapter of a statewide organization working to inform and persuade voters to vote for the Tentative Water Services Act.

One speaker complained that the GVWD should have distributed such maps already. "If 25 percent are against the annexation, the rest should be for it," said GVWD member. "I can't adequately deal with all this," said Goodwin.

"The public hearing today is designed for the public to serve water once boundaries were annexed to the city was a primary concern of members. "I can't adequately answer as to how city taxes would be allowed," said one who asked Goodwin. "We should find an answer to your question." "What would happen if an annexation is not reached?" "Well, there would be a big dispute between the parties," said the district who would supply water to overlap areas, and litigation would have ensued.

"S.B. - Goleta Water

(Continued from p.1)

in the Goleta-Danta Barbara boundary area is a part of the agreement," according to Paul.

Hone said, "The public hearing tonight is designed for the public to serve water once boundaries were annexed to the city was a primary concern of members. "I can't adequately answer as to how city taxes would be allowed," said Goodwin. "We should find an answer to your question." "What would happen if an annexation is not reached?" "Well, there would be a big dispute between the parties," said the district who would supply water to overlap areas, and litigation would have ensued.

The GVWD agreed that there would be a problem of who would serve water once boundaries were policed, unless there was water annexation.

The effect of tax increases on people whose land would be annexed to the city was a primary concern of members. "I can't adequately answer as to how city taxes would be allowed," said Goodwin. "We should find an answer to your question." "What would happen if an annexation is not reached?" "Well, there would be a big dispute between the parties," said the district who would supply water to overlap areas, and litigation would have ensued.

Many private home owners in the overlap areas expressed their concern over the possible commercial and industrial development at the airport which could affect those who are annexed," said Goodwin. Hone said, however, "The public hearing today is designed for the public to serve water once boundaries were annexed to the city was a primary concern of members. "I can't adequately answer as to how city taxes would be allowed," said Goodwin. "We should find an answer to your question." "What would happen if an annexation is not reached?" "Well, there would be a big dispute between the parties," said the district who would supply water to overlap areas, and litigation would have ensued.

The city's second public hearing on the Tentative Overlap Agreement will be held Nov. 30 at 9:00 a.m.

Donations for Cambodian Refugees will be collected by the Student Hunger Action Group in front of the UCen today and tomorrow and throughout dead of the week from 8 a.m. to 6 p.m.

"A lot of people have been asking us what they could do to help give people a chance to give through four agencies. -- the Red Cross, UNICEF, Oxfam and World Vision," said Gary Dietrich, SHAG coordinator.

Although contributions to the general fund will be divided equally among the four agencies, it is possible to specify which agency will receive the donation money. UNICEF has announced that all donations it receives will go directly to the Cambodian refugees.

It is estimated that two million could die by Christmas, and thousands more have died in the refugee camps already. The death rate is particularly high for kids under five. There are very few kids under five left alive in Cambodia, Dietrich said.

Facility and staff may submit their contributions to the Office of Student Life, in care of Student Hunger Action Group, in addition to making the contribution in front of the Union. Receipts will be provided upon request. Dec. 6 is the deadline for all contributions.

ATTENTION STUDENTS: Students are to turn in their locker and clothing before 4:30 pm Fri., Nov. 30. Fines will be imposed for failure to do so.

Engineering Professor Named Chief Scientist for Air Force

An important aspect of his job, Stear explained, will be explaining discoveries in Air Force research to civilian commercial purposes. Big budget programs that are being made, Stear said, can be used to make very fast computers.

Stear has been a member of the Air Force Scientific Advisory Board and NASA's Aeronautical Advisory Committee, and he has been a special consultant formissible flight testing to the com­mander of the Space and Missile Test Organization at Vandenberg Air Force Base.

In 1954 Stear received a B.S. in mechanical engineering from Bradley University, in 1966 an M.S. in mechanical engineering from USC, and in 1961, a Ph.D. in electrical engineering from UCLA.

He has been teaching at UCSB for 11 years and became a full professor in 1972.

Stear has written two scientific books and has written numerous other scientific publications.
By MAURA DALY

Everyone had expected the UCSB water polo team to win the PCAA championship, but one thought it would be as simple as it proved to be.

The Gauchos clinched the title Saturday night after five easy games at Long Beach State and earned a berth in the national tournament in Long Beach.

Coach Pete Synder was picked PCAA Coach of the Year by his fellow coaches. This is only Synder’s third season coaching the team, leading them to an impressive 22-2-1 overall record.

The Gauchos flew through the first round matches with no problems and no competition. They beat Fresno State 10-4, San Jose State 22-1 and Pepperdine 17-4.

Synder was surprised at how easily they defeated Pepperdine.

“That game was a lot easier than I had expected. We were playing well, but they really conceded that game to us,” said Synder.

Long Beach State obviously wasn’t helped much by the home team advantage. UCSB defeated them 11-6 without any difficulties.

“Long Beach is a pretty good team, but they are younger and less experienced,” Synder said.

The Long Beach pool is indoors and has a deep bottom unlike UCSB’s pool. Fortunately we didn’t get burned too much on defense because of the bottom. We are finally getting accustomed to deep bottom pools,” Synder commented.

There weren’t many fans at any of the games. “I guess everyone felt it wouldn’t be much of a contest. We had a loyal group of parents, wives, alumni and friends cheering for us,” Synder said.

“The last rounds were not the most artistic. Everyone was pretty fatigued at that point. Five games in one weekend is a lot,” Synder explained.

The final game was played with everyone under pressure. “If we beat Irvine, we wouldn’t have one the championship or an automatic berth at the National tournament,” said Synder.

UCSB was upset by Irvine, the game, the first league championship in the team’s history, went to a berth in the National tournament where they will be one of the top contenders for the National title.

PAC-10 All-Conference Team

UCSB’s Bill Yates (42) and the UCSB team easily picked PCAA Coach of the Year by Synder (18-2-1 overall record). UCSB’s Bill Yates (42) and the UCSB team easily picked PCAA Coach of the Year by Synder (18-2-1 overall record).

The Gauchos’ 22-2-1 record was impressive 20-2-1 overall record. Synder was surprised at how well the boys played. The Gauchos had a loyal group of parents, wives, alumni and friends cheering for us,” Synder said.

THANK YOU FOR HELPING US RECYCLE LIFE.

GUAHOS OUTSCORE OPPONENTS, 82-23, SNAP/NAMED COACH OF YEAR

UCSB’s Bill Yates (42) and the UCSB team easily defeated the Anteaters at home, 10-4 earlier in the season, but the score was closer this weekend in the UCSB-UCLA game. The Gauchos scored 14 goals in the first half and were up 10-4 going into the final quarter," said Synder.

Senior Greg Boyer was named the tournament’s most valuable player. David Hendrickson and Michael Yates were also named to the PCAA all-conference team.

“Boyer played very well offensively. He and (John) Dobrott were our high scorers throughout the game to us,” said Snyder.

The Long Beach pool is indoors and has a deep bottom unlike UCSB’s pool. Fortunately we didn’t get burned too much on defense because of the bottom. We are finally getting accustomed to deep bottom pools,” Synder commented.

Surfers Beat UCSD, Ready for Winter Waves

By ELIZABETH WEISSENBORN

Dedication is a deceptive term used to describe the masochistic lifestyle most self-proclaimed "jocks" lead.

Regular morning workouts, tape jobs and after-practice wind sprints are all part of the price winning athletes must pay.

But one group of competitors conduct morning workouts on foot—10-foot surfboards, watching the sunrise over the mountains, tape jobs only for a "grumpy dog," and wind sprints running to catch the evening glass.

The UCSB surf team doesn't have regular practices, the coach doesn't scream instructions and the surfers don't anxiously await the showers. It's an individual sport, where the thrill of victory comes from "perfect tubes" and "radical" cutbacks.

Under the direction of coach Bob Whittacker, the squad consists of 12 men, three women and three kneeboarders.

They compete in 35-minute heats, three contestants at a time. Each surfer takes as many rides as possible and the judges total their best three rides.

Points are given for size of wave, length of ride and "radicalness" of the maneuver. The top point-graber wins the event, and total point scores determine the overall team title.

Eric Hanscomb, captain of the team, is in the top spot for the men's team. His consistent performances in both the surfing and kneeboarding heats helped lead the team to a 4-4-2 victory over UCSD, Nov. 11.

"I'd never kneeboarded before, but we were only leading by one going into the final heat and our kneeboarders hadn't shown, so I went for it," Hanscomb said.

Yesterday, they met Orange Coast College in the biggest rival meet of the season. "OCC was our only loss last year, so if we can beat them, we should win the league," Hanscomb added.

Surf team competes all year with team competition until January and individual contests through June.

Most UCSB home meets are held at Santa Barbara, but due to the erratic swells there, some meets are moved to Jalama.

"Wave conditions are very important for a good meet, so even though it's a hassle to drive an hour away for big waves, it's worth it," Hanscomb commented.

Shelly Darrow holds a secure number one spot on the women's team. According to Hanscomb, Darrow's high scores will be a determining factor against tougher teams, OCC, San Diego State and Cal State Long Beach.

Although surfing has an image like Frisbee at UCSB, these athletes take their sport very seriously. The National Amateur Surfing Association now offers scholarships and the league consists of eight teams.

"We have one big advantage," Hanscomb said. "We look forward to practice because everyday brings new waves and new challenges."

It makes one wonder if the masochism is all it's cracked up to be.

The UCSB Daily Nexus is looking for people interested in news reporting. If you would like to write for the paper, or if you would like to cover an area which you feel the news department is neglecting, come into the Nexus offices under Storke Tower and talk to News Editor Tracy Strub.

Reg Fee Increase

(Continued from p.1)

another three years.

He added that students also recommended a three-year funding period, besides approving an annually one-year reg fee increase. This approach would allow the regents to make proposals appropriate for reg fees and proposals for reg fee improvements on each campus for increasing fees for the next year. The reg fee request was made because students on some campuses

adding, "At least in my depart­

ment the best scholars are almost always the best teachers."

It was "widely agreed that while upper division and graduate students may derive direct benefits from the knowledge gained through faculty research, lower division students should have instructors who are more teaching oriented."

Robert Rigs, a lecturer in the Physics Department, expressed concern over the possible loss of fellowship positions and stipends by saying, "There has to be a lot more work done in getting students excited, a lot more work put into courses than into these courses. One solution would be to hire students in that graduate division with a specialty of teaching."

Whether the findings of this study would open up debate. The larger question of whether students are better or worse off because of the large emphasis placed on research, also remains.

For the best summation of the situation was offered by UCSB Academic Senate Chair Walter J. Jenkins, who said, "There are always costs and benefits. In the short run students might benefit from shifting from research to con­

sultation but in the long run they would suffer by having a faculty that is dead and dull."

Energy Alternative

(Continued from p.1)

By June 1979, the world's largest wind turbine began operation in Bosco, North Carolina. The wind generator has a blade 300 feet in diameter mounted on a 140 foot high tower. A automatic control system ensures that the blade is properly aligned with the wind. It produces two megawatts of electricity at winds of 25 miles per hour. Hydroelectric dams provide 40 percent of the Northwest's power, with another 35 percent powered in 1961. Dams work by gravity in one cubic foot of water 1,000 gallons of electricity. Hydroelectric power is a renewable solar system in that the sun's energy causes ocean evaporation and moves clouds, whose rain and snow floats the dam's water supply. Problems with hydroelectric power, with turning a river into a lake include erosion, change in water temperature and disruption of wildlife habitats. Indian fishing grounds and archaeological have been flooded. Dams have also helped ruin the salmon runs, but have helped fish ladders to aid them in returning to their spawning grounds. A survey by the Department of Energy found that small scale hydro power dams could provide as much as 200 million additional kilowatts of power if all suitable

areas were utilized. The U.N. Institute for Training and Research noted the capacity was "much higher than any estimated contribution in the foreseeable for future of nuclear power, solar energy, or wind power to the electricity generating supply of the United States by the year 2000."
